Faculty of Applied Sciences
UNIVERSITY OF SRI JAYEWARDENEPURA SRI LANKA

A Journey through Time

The faculty of Applied Science of the University of Sri Jayewardenepura was established almost fifty years ago and enjoys the distinction of being the second oldest faculty of the University.

Even though it was first established as a Faculty of Science, it pursued a path somewhat unconventional to such a faculty implementing many new and revolutionary ideas.

Replacing traditional Applied Mathematics with Statistics, introducing courses covering applied aspects of Science such as Fisheries Biology, Forestry, Food Science, Polymer Science, Electronics and Geophysics into its curriculum and opening the gates of Physics and Mathematics Departments to Bioscience students were some of the innovations implemented during its formative stages.

Most to these innovations have now been emulated by many well established faculties of science of the country providing a living testimony to the prudence of the Stand taken by us almost half a century ago. Our attempts to produce a Faculty of Science suitable to a developing country such as Sri Lanka received the official recognition when the Faculty of Science of the University of Sri Jayewardenepura (then Vidyodaya Campus of the University of Sri Lanka) was converted to the first Faculty of Applied Sciences of the country in 1973 by the University of Ceylon Act No. 1 1972.

Today almost after fifty years of its establishment the faculty has grown and blossomed into the flagship Faculty of Applied Sciences of our country with eleven academic

departments and a student population exceeding 1200. Further, it is blessed with a conglomeration of highly qualified academic staff.

Comprising of nearly a hundred members, some of whom have won recognition as leading scientists in the country in their specialized areas and have received many accolades from the state and other prestigious scientific bodies. Over the years the faculty has developed a research intensive culture and strong flair for postgraduate education.

At present the faculty conducts ten M.Sc. courses and several M.Phil and Ph.D. programmes in various specialized disciplines.

In addition to the academic activities conducted within the university premises we provide an opportunity for students to expose themselves to the industrial and research environment of the country through industrial placements, work shadowing, field trips etc. This has paid good dividends in terms of students getting familiarized with the work culture, ethics and expectations and its vicissitudes. The faculty is proud that many of its past students are holding important positions in academia, government institutions and in the industry contributing immensely towards the development of the country. We are very much hopeful that the students who entered the Faculty of Applied Sciences this year too would excel in their academic and other pursuits and make their contribution to society as proud graduates of the University of Sri Jayewardenepura.

Professor Upul Subasinghe

**Acting Vice-Chancellor, University of Sri Jayewardenepura
Dean, Faculty of Applied Sciences, University of Sri Jayewardenepura**

It gives me great joy to welcome you to the University of Sri Jayewardenepura.

You have reached yet another important milestone in your life and I would first like to congratulate you on gaining admission to a state university. I am sure that you are overjoyed to see the results of your immense dedication and hard work.

The University of Sri Jayewardenepura (USJ) guided by its vision and mission has been an outstanding institution of higher education in Sri Lanka with a long history. Devoted to producing well rounded graduates equipped with the knowledge, skills and experience who can excel in a demanding, fast paced environment, USJ takes pride in being the largest University in Sri Lanka in terms of students numbers, being the home to more 15,000 undergraduate students. Comprised of eleven faculties providing higher education in a multitude of study areas, USJ provides higher education through a highly qualified academic staff who has obtained their relevant qualifications from world renowned institutions.

Established as the second faculty of the University, the Faculty of Applied Sciences (FAS), offers top ranked

academic programmes in various fields through eleven departments. Keeping up with the newest trends in the world of science, FAS possess the infrastructure facilities such as full-fledged lecture halls and state of the art laboratories to provide you with an all-inclusive education experience and to prepare you to succeed in your respective careers. The curriculum of the degree programmes offered by the Faculty of Applied Sciences meets and often exceeds the expectations of the relevant industries as it is ever evolving and keeping up with newly discovered knowledge and dynamic nature of the industries.

As Nelson Mandela once said, “education is the most powerful weapon which you can use to change the world”. Hence, the University and the Faculty will be providing you with all that is necessary to help you reach great heights in your respective careers and personal lives. I hope you will grab this opportunity to become a well-rounded individual with knowledge, skills and experience who will provide and exceptional service to your motherland and the world. While congratulating you once again for your achievements thus far, I wish you the best of luck for all your academic endeavours and I hope you will have a wonderful undergraduate experience at the University of Sri Jayewardenepura.

*The Faculty of Applied Sciences
of the University of Sri Jayewardenepura
is committed to excellence in
teaching, research and in enriching
its students in many facets of life*

Undergraduate Courses Degree Programmes

AMT

Applied Mathematics

Offered by the Department of Mathematics

“Applied Mathematics is a blend of Mathematical Sciences and Specialized knowledge which describes professional speciality for practical problems”

B.Sc. Degree with Applied Mathematics

Course Code: AMT

Duration: Three years

Subject Combinations: Refer pages 146-151

For whom?

Students from physical science stream who have a potential to deal with applications of mathematics with sharp logical and critical thinking and willing to undertake challenges.

Career opportunities

With the advancement of technology and development of various industries, a tendency to apply improved mathematical tools and techniques to gain significant results has cropped up. Moreover, new application areas are being discovered day by day which require the subject oriented knowledge to handle the application procedures. Thus, at present professionals with applied mathematical background and skills are at a high demand worldwide, especially in the fields of engineering, technical and industrial sectors and also in research institutes.

Course overview

The Applied Mathematics course is a combination of mathematical science, applications and knowledge. An opportunity to study Applied Mathematics will develop a professional specialty in an undergraduate to work on real world problems by formulating and studying mathematical models. It will pave the path to develop a successful career, well-adapted to the present industrialized world and also will give an excellent opportunity for individuals to serve the society using their knowledge and skills. Mathematics improves a person's logical thinking while skills in Applied Mathematics will enable him/her to face a practical situation successfully.

Course structure

Applied Mathematics B.Sc. is offered as one of the three subjects for BSc Degree in a permitted subject combination for physical science students. Applied Mathematics course units are categorized in to “core” and “optional” course units. The core course units are designed to provide students with a solid foundation of fundamental concepts and essential techniques of Applied Mathematics as well as to introduce them to different fields of the subject. All the course units in the first two years of the program are core units. A broad selection of optional course units is offered in the third year to allow students the opportunity to pursue courses that cater their subject interests and career ambitions. The success of modern mathematical concepts, techniques and software had given rise to the involvement of knowledge in computational mathematics in practical applications of mathematics.

The department offers practical components along with Applied Mathematics courses together with an access to a well-equipped computer laboratory.

B.Sc. Honours Degree in Applied Mathematics

Duration: 4 years

For whom?

Focused on students who are willing to develop an expertise skill in handling Applied Mathematical knowledge to solve practical problems in real world scenarios.

Career opportunities

A Honours degree in Applied Mathematics enables graduates to find employment as professionals in any industry, science and technological institutes, academic and research institutes, engineering field or any other field which requires the use of a practical application of mathematical techniques.

Course overview

The Honours degree is aimed at offering undergraduates with thorough theoretical and practical knowledge relevant to the subject. Students will not only learn but also feel mathematics through the exposure that they receive through the program. Honours degree students are also provided with the benefit of experiencing practical sessions along with some course units in a well equipped computer laboratory.

Course Structure

The course units in the Honours degree program are designed to provide students with an in depth knowledge in both classical and modern topics of Applied Mathematics ranging from Quantum Mechanics to Actuarial Sciences. In addition the students are offered courses in related fields such as Statistics, Computer Science and Programming that are designed not only to emphasize the power of Applied Mathematics to the student but also to develop their skills in the respective fields that are of essential importance for their future careers. To develop student's soft skills, the department has integrated presentations and practical components as methods of assessments to most courses. The industrial internship and the related project that is

offered during the final semester of the program allow students to realize the applicability of their acquired knowledge, and develops their finer skills that would help them to overcome the challenges they will have to face when working with real world problems.

Selection

Promising students are selected for the B.Sc. Honours Degree in Applied Mathematics at the end of the second year based on their performance in Applied Mathematics courses with an acceptable level of performance on the other two subjects.

For further information please contact:

Mr. K.K.W.A.S. Kumara
Head/Department of Mathematics
E-mail: sarath@sjp.ac.lk

Applied Mathematics

B.Sc. Degree Course Units

Each student should take course units having minimum cumulative credit value of 27.0

FIRST YEAR

Semester I

AMT 111 2.0	Analytical Geometry	c
AMT 112 2.0	Mathematical Statistics I	c
AMT 113 1.0	Financial Mathematics	c

Semester II

AMT 121 2.0	Classical Mechanics	c
AMT 122 2.0	Computational Mathematics	c
AMT 123 1.0	Mathematical Modeling I	c

SECOND YEAR

Semester I

AMT 211 2.0	Design and Analysis of Algorithms	c
AMT 212 2.0	Mathematical Statistics II	c
AMT 213 1.0	Introduction to Geometrical Transformations	c

Semester II

AMT 221 2.0	Mathematical Computing	c
AMT 222 2.0	Fluid Dynamics	c
AMT 223 1.0	Discrete Mathematics	c

THIRD YEAR

Semester I

AMT 311 2.0	Applicable Mathematics	o
AMT 312 2.0	Actuarial Science	o
AMT 313 1.0	Computational Discrete Mathematics	o

Course Type

-C-
Core

-O-
Optional for
those doing
Mathematics

AMT 322 2.0	Quantum Mechanics	O
AMT 323 1.0	Operational Research I	O#
AMT 324 2.0	Mathematics Teaching for Active Learning	O
AMT 325 2.0	Regression Analysis	O

Honours Degree Course Units

PART I

Semester I

AMT 311 2.0	Applicable Mathematics	C
AMT 312 2.0	Actuarial Science	C
AMT 313 1.0	Computational Discrete Mathematics	C
AMT 351 2.0	Cryptography	C
AMT 352 2.0	Non Linear Differential Equations and Dynamical Systems	C
AMT 353 2.0	Computer Algebra	C
AMT 354 2.0	Accounting and Finance	C
AMT 355 2.0	Seminar and Report Writing	C
AMT 356 2.0	Probability Theory 1	O

Semester II

AMT 321 2.0	Mathematical Modeling II	C
AMT 322 2.0	Quantum Mechanics	C
AMT 323 1.0	Operational Research I	O#
AMT 325 2.0	Regression Analysis	O
AMT 326 1.0	Production Control (based on MAN 326 1.0 Production Control)	O
AMT 376 2.0	Rotational Systems	C

AMT 377 2.0	Computational Statistics	c
AMT 378 2.0	Data Analysis and Preparation of Reports	c
AMT 379 2.0	Object Oriented Programming	o*
AMT 380 2.0	Probability Theory II	o
AMT 390 2.0	Statistical Quality Control	c

PART II

Semester I

AMT 451 3.0	Advanced Numerical Techniques	c
AMT 452 3.0	Optimization (based on MAT 453 3.0 Optimization)	c
AMT 453 2.0	Applied Mathematical Techniques	c
AMT 454 2.0	Graph Theory with Applications	c
AMT 455 2.0	Operational Research II	o [#]
AMT 456 2.0	Industrial Management (based on ASP 434 2.0 Industrial Management)	o
AMT 457 2.0	An Introduction to Answer Set Prolog (based on MAT 358 2.0 An Introduction to Answer Set Prolog)	o
AMT 458 2.0	Applied Optimal Control	o
AMT 459 2.0	Mathematics of Machine Learning	o

Semester II

AMT 476 8.0	Industrial Training	c
AMT 499 8.0	Project	c

Course Type

Optional for those doing Applied Mathematics but those who have done Management Science in first two years are not allowed to do this course.

ARM

Aquatic Resources Management

Offered by the Department of Zoology

“Aquatic Resource Management is a multi-disciplinary field of study pertaining to the planning, development and sustainable utilization of aquatic resources”

B.Sc. Degree Programme with Aquatic Resources Management

Course code: ARM

Duration: 3 Years

Subject combinations: Refer pages 146-151

For whom?

For students from biological sciences streams who are interested in pursuing careers in Aquatic Resources Management.

Career opportunities

Sri Lanka is an island nation with a rich endemic biodiversity within aquatic environments and abundant resources in fisheries. In spite of the advent of the 21st century, the wealth of our aquatic resources is relatively unknown compared to the resources available within terrestrial environments. In order to maximize the potential of our island nation in aquatic resources, it is important that a pool of talent is developed who are equipped with specialist and applied knowledge in Aquatic Resources Management. Therefore, by the provision of broad in its spectrum

of employment opportunities with prospects of joining government ministries, private organizations, fisheries based industries, consultancy firms engaging in aquatic resources management, ornamental fish based businesses with an export orientation as well as providing opportunity for entrepreneurship.

Course overview

The subject, Aquatic Resources Management, aims to provide the all-round development of a student with specialist knowledge of aquatic environments namely fresh, brackish and marine ecosystems. The impartation of specialist knowledge in aquatic ecosystems is covered by a diverse range of topics, including Aquatic Diversity, Planning, Conservation, and Sustainable Utilization of Aquatic Resources, Aquaculture and Fisheries, applications in GIS and

Aquatic Modeling. Outside of the key subject areas, students are equipped with communication and problem solving skills, team work and perseverance and leadership qualities to ensure their career readiness to secure a future within the 21 century workforce.

Course structure

Aquatic Resources Management will contribute one third of the B.Sc. degree program within the framework of a permitted subject combination. Students are required to take course units equaling or exceeding a cumulative credit value of 27.0 points. Course units are classified as compulsory, core and optional course units and the course units are designed to provide the student with specialist knowledge and skills required in contemporary Aquatic Resources Management.

B.Sc. Honours Degree Programme in Aquatic Resources Management

Duration: 4 Years

Career opportunities

The career opportunities available for graduates of the Special Degree Program in Aquatic Resources Management, will be centered on academia, government ministries and agencies, consultancy firms and as well as practicing their trade as researchers in a diverse range of hierarchical positions undertaking in depth studies on contemporary research topics with the objectives of bridging gaps in knowledge and deciphering cryptic areas in Aquatic Resources Management.

Course overview

The B.Sc. Honours Degree in Aquatic Resources Management aims to prepare a new breed of experts with marketable and transferable skills in contemporary applied Aquatic Resources Management. The programme imparts a higher level of specialist knowledge and practical training and is ideally suited for student with aspirations for graduate studies and further research training.

The core strengths of the Honours Degree Program are the coverage of specialist knowledge, both in- depth and with a wide spectrum of horizontal topics, the provision of a higher degree of practical skills which are transferable beyond the learning environment, higher levels of analytical and communication skills and in whole, a well rounded education program suited for research endeavors or higher studies under

specialist topics. The final year research project is of core significance to the Honours Degree Program which advances a student's capacity to undertake research endeavors, develops core analytical skills, expand communication, networking and language skills and to pursue careers in academia

Selection

Selection of students for the Honours Degree Programme is based on the student's performance in the first two years of the academic program and the intake is based on student number and staff availability.

Instruction and assessment

The impartation of education to students enrolled in General and Honours Degree programmes, will be conducted by an eminent group of lecturers, with proven track records in academia and research. The teaching environment within the Department of Zoology consists of lectures, laboratory practicals, field studies and project assignments which ensures the all-round development of students in specialist knowledge and practical training. The modes of assessment include end-of-semester examinations, practical tests, presentations and reports.

BIO Biology

Offered by the Departments of Zoology and Botany

“Biology is a fundamental and applied science which is centered on the structure, function, interactions, evolution and taxonomy of biological organisms”

B.Sc. Degree Programme with Biology

Course code: BIO

Duration: 3 Years

Subject combinations: Refer pages 146-151

For whom?

For students from biological sciences streams who are interested in pursuing careers in fundamental biology.

Career opportunities

Sri Lanka boasts a rich endemic biodiversity and reasonable diversity in ecosystems, within which

there is a wealth of fauna and flora and bioactive compounds, which serve as invaluable remedies for a host of infectious and non-communicable diseases. In order to harness the potential of our island nation in biodiversity and biological resources for conservation, eco-tourism and bioprospecting endeavors as well as for the appreciation of biology it is important that a pool of talent is developed who are equipped with specialist and applied knowledge in fundamental biology. Therefore, by the provision of skilled graduates in contemporary Applied Biology, the Departments of Botany and Zoology, contribute towards national development through its alumni. The

scope in Biology is reasonably broad in its spectrum off employment opportunities with prospects of joining government ministries, private organizations, eco-tourism ventures conservation organizations, ecological establishments, museums, universities and secondary schools, as well as providing opportunity for entrepreneurship.

Course overview

The specialist subject, Biology, aims to instill in students, an appreciation for plant and animal sciences, especially in relation to the acquisition, integration and application of specialist knowledge in contemporary biology, in order to ensure the holistic development of the undergraduate community. The development of a student's appreciation of fundamental biology is molded through the impartation of relevant and timely topics in contemporary applied biology, including, Genetics and Molecular Biology, Insect Pest Management, Plant Propagation and Horticulture Human Nutrition, Natural Resources and their Management, Ecology and Biological Statistics. Outside of the key subject areas, students are equipped with communication and problem solving skills, teams work and perseverance and leadership qualities to ensure their career readiness to secure a future within the 21st century workforce.

Course structure

Biology will contribute one third of the B.Sc. degree program within the framework of a permitted subject combination. Students are required to take course units equaling or exceeding a cumulative credit value of 27.0 points. Course units are classified as

compulsory, core and optional course units and the course units are designed to provide the student with specialist knowledge and skills required in contemporary Biology.

B.Sc. Honours Degree Programme in Biology

Duration: 4 years

Career opporrunities

The career opportunities available for graduates of the Special Degree Program in Biology will be centered on academia, consultancies at government and non-government agencies, and as researchers in a diverse range of positions.

Course overview

The B.Sc. Degree in Biology aims to provide a group of experts with required skills in applied Biology. The program imparts a higher level of specialist knowledge and practical training and is ideally suited for students with aspiration for graduate studies and further research training.

The core strengths of the Honours Degree Program are coverage of specialist knowledge, the provision of a higher degree of practical skills which are transferable beyond the learning environment, higher levels of analytical and communication skills and in whole, a well rounded education program suited for research endeavors or higher studies under specialist topics. The final year research projects is of major significance to the Honours Degree Program because it advances a student's capacity to undertake research

endeavors, develops core analytical skills and expands communication, networking and language skills.

Selection

Selection of students for the Honours Degree Program is based on the student's performance in the first two years of the academic program.

Instruction and assessment

The impartation of education to students in B.Sc. programme and Honours Degree programs will be conducted by an eminent group of lecturers, with proven track records in academia and research. The teaching environment within the Departments of

Botany and Zoology consists of lectures, laboratory practicals, field studies and project assignments which ensure all-round development of students in specialist knowledge and practical training. The modes of assessment include end-of-semester examinations, practical tests, presentations and reports.

CHE Chemistry

Offered by the Department of Chemistry

“Chemistry is a branch of natural science that deals with properties of molecules, their chemical reactions and laws that describe molecular interactions. Chemistry is a central science and has interactions with many other subjects”

B.Sc. Degree Programme with Chemistry

Course code: CHE

Duration: 3 Years

Subject combinations: Refer pages 146-151

For whom?

Students from both biological and physical science streams who are interested in pursuing careers related to a wide range of chemical disciplines in order to

address the important problems that lie at the interface of chemistry and closely related subjects. The intake is limited to a maximum of 400 students per academic year.

Career opportunities

Chemistry is central to all sciences and is important to scientists and professionals such as doctors, biologists, engineers, physicians, pharmacists, nurses, and science teachers. There is a high demand for chemists

in public sector organizations, and manufacturing and service industries in the private sector. The gained experience will take you on to many diverse and rewarding career pathways.

Course overview

Courses incorporate the most recent advances in the discipline and provide students with a strong foundation in the fundamentals of chemistry. More specialized optional courses which cover a wide range of topics to suit their future goals are offered. Courses in chemistry are designed to meet the needs of the country along with transferable skills such as communication, problem solving, team work, selfdirection, leadership and to prepare the students to seek employment with confidence.

Course structure

At the undergraduate level, a three year course is offered to the general degree students who offer other subject disciplines for the degree. All chemistry students follow all the first year and second year course units. These include compulsory and core units, which are designed to provide students with essential knowledge and skills that are required to specialize in chemistry as well as to other students who require a solid chemistry foundation in related disciplines. Based on their performance at the end of the second year, some are selected to follow the honours degree programme.

General degree students in their third (final) year, have a range of optional courses in more applied areas of the subject to choose from. The compulsory practical class comprises of 3 hour classes for 10 weeks lasting a total of 90 hours laboratory work for each year, which involves the three main branches of chemistry (Organic, Inorganic, and Physical). The practical is intended to provide students with hands on experience in analytical, technical, instrumental and problem solving skills required in many career pathways.

B.Sc. Honours Degree Programme in Chemistry

Duration: 4 Years

For whom?

This degree is designed for those who wish to gain an in depth knowledge, skills and broader perspective in chemistry as demanded by the industry and academia.

Career opportunities

The B.Sc. Honours Degree in Chemistry, offered by the Department of Chemistry is aimed at training professionals in the field of chemistry with insight, skills, advanced and updated knowledge. The strong foundation laid by the Honours degree would enable the students to acquire postgraduate qualifications from recognized universities which would lead the

career path in academia in universities and research institutes in Sri Lanka.

Course overview

B.Sc. Honours degree courses are carefully designed to meet the demands of specialized industries and postgraduate institutions. The courses are a combination of theory and practical with integrated soft skills to make students confident in following their chosen career paths. The students following the special degree programme in chemistry are well trained to join any university worldwide as graduate assistants in pursuing doctoral studies.

Course structure

The chemistry Honours degree students in their third year follow advanced courses in the core subject areas, while the fourth year students have wider choice of specialized optional courses, some of which relate to applications of chemistry in industry. Students are required to carry out a research project in their final year. It helps students to sharpen their scientific reasoning, research and analytical skills, and prepare them to take up research work in academic careers. A dissertation is submitted for assessment at the end of the year, which is evaluated after an oral presentation followed by a viva voce examination. The special

degree students also undergo a short industrial placement during the course. The industry-based assignment/training project in the fourth year allow students to get hands-on experience in applying the theoretical concepts that they learnt in the class room while providing an invaluable opportunity to further strengthen their work ready skills and team work.

Selection policy

Selection of students to follow the B.Sc. Honours Degree in Chemistry is based on student performance in the first two academic years. The intake is typically limited to maximum of 30 students.

Mode of Instruction and Assessment

The modules include lectures, tutorials, laboratory

practicals, industrial visits and individual and group projects/assignments. These are assessed through end-of-semester written examinations, practical tests, presentation and reports. There is an emphasis on analysis of real problems to reinforce learning. This provides the tools required for group and individual projects. For the practical class, assessment will include attendance, record book and a practical exam held separately for Organic, Inorganic, and Physical Chemistry. A minimum of 80% attendance will be an essential requirement for completing the practical component.

For Further Information please contact:

CSC Computer Science

Offered by the Department of Computer Science

“Computer science deals with an integral part of modern society which drives the advances of other disciplines at an exponential rate”

B.Sc. Degree Programme with Computer Science

Course Code: CSC

Duration: 3 Years

Subject Combinations: Refer pages 146-151

For whom?

Students from physical science stream who are interested in pursuing careers related to Computer Science. The intake is limited to a maximum of 120

students in an academic year.

Career opportunities

Organizations that use computers on a large scale such as banks, insurance companies, the electronics industry, central and local government, and management in all areas of business offer employment opportunities to graduates with computing skills. Some graduates spend their time on software development and computer systems support and remain in mostly technical environment.

Course overview

Learning Computer Science is about understanding computer systems at a deeper level. This includes both software and all its related hardware. The computers and software they run are among most complex products ever created by humans. Designing and using them effectively presents immense challenge. This course concentrates on creating links between theory and practice. It covers a wide variety of software and hardware technologies and their applications. Students are introduced to a range of modern programming paradigms, including procedural programming, object oriented, visual and logic programming. Other disciplines such as software engineering, net centric computing and intelligent computing are also covered. The syllabus offered by the department covers a vast area of the subject and is revised regularly to include the most recent developments in the industry.

Course structure

Computer Science will constitute one third of the B.Sc. (General) degree program in allowed subject combinations. Students are required to take core course units in CSC having a minimum cumulative credit value of 27.0. These course units are designed to provide students with essential knowledge in theory, practice and skills that are required in computing industry.

Mode of instruction and assessment

Students enrolled in general degree program in Computer Science will be taught by academic staff with well-established track records. The medium of instruction is English. The course units include; lectures, assignments, individual and group projects and laboratory practical. They are assessed through continuous assessments, end-of-semester written examinations, practical examinations, presentations and reports.

B.Sc. Honours Degree Programme in Computer Science

Course Code: CSC

Duration: 4 Years

For whom

Students who follow Computer Science as a subject for B.Sc. (General) degree program are selected for the special degree.

Career opportunities

Employers recognize a Honours degree as proof of additional skills, knowledge and achievement. In the present job market, Computer Science graduates are better placed than many others to obtain employment. The passion pursued in the final year will enable the students to guarantee high positions

in the industry. Computer manufacturers and software houses, for example, recruit specialists to develop software solutions. Some of the current designations of Computer Science graduates are Lecturer, Assistant Project Manager, Software Engineer and Business Analyst etc.

The degree also prepares the students for further study in Master's and Ph.D. programs and opens up the possibility to have an exciting research career, helping communities to solve complex problems.

Course overview

The Computer Science Honours degree is designed for those who want to mark out as high achievers by gaining advanced skills and greater depth of knowledge in Computer Science which will widen the employability and career options in the industry and academia.

At the final year students are required to carry out a research project and industrial placement scheme which exposes the students to the industrial and computing environment.

Course structure

During third year (Part I) students need to obtain minimum of 30.0 credits from Part I courses, out of which 27.0 credits from core course units and 3.0 credits from optional units. In fourth year (Part II)

students are required to offer course units having a minimum cumulative credit value of 30.0 from Part II courses.

Selection criteria

The selection is based on student performances in the first two academic years. Students are required to maintain a high GPA value in Computer Science and a good overall GPA. Also they need to maintain good attendance records (80%). The students intake typically depends on the resources available during the time of selection.

Mode of instruction and assessment

Students enrolled in Honours degree programme in Computer Science will be taught by academic staff with good track records. The medium of instructions is English. The course units include; lectures, assignments, individual and group projects and laboratory practical. They are assessed through continuous assessments, end of semester written exams, practical examinations, presentations and reports.

ECN Economics

Offered by the Resource Economics Unit

“Economics is the science that analyzes the production, distribution, and consumption of goods and services”

B.Sc. Degree Programme with Economics

Course Code: ECN

Duration: 3 Years

Subject combinations : Refer pages 146-151

For whom?

The Economics programme is designed for mathematically competent students who follow the subject areas of statistics and mathematics and wish to experience a broader fundamental exposure in Economics or who want to become professional economists.

Course overview

Economics course units offered will provide an important opportunity for the students to gain a solid understanding in principles of economics along with applied areas related to natural resources, environment and industries.

This course of study provides a stimulating setting for the students to gain a solid understanding of economic applications useful in providing guidance for decision making under resource scarcity.

Course structure

Economics course units focus on the study of basic and advanced courses of theoretical economics such as Micro and Macro Economics and applied areas including Environmental economics, Industrial Economics, Project Planning and Analysis, Agricultural and Health Economics, and Resource Economics. From a total of 30 credits, minimum of 27 credits must be completed at the end of 3rd year to complete the degree. These include compulsory and optional course units.

The Department of Economics of the Faculty of Humanities and Social Sciences provides the expertise and support in conducting the basic and advanced courses of economics lecture series. Major part of the applied courses will be conducted by the lecturers from the Department of Forestry and Environmental Science and the Department of Food Science and Technology.

Mode of instruction and assessment

The teaching method of Economics is a blend of theory and practice. To ensure that students are acquiring the required knowledge and competencies, end of semester examination, presentations and written reports will be held. Guest lectures and field visits are also given due importance throughout the semester.

Students who have successfully completed their general degree with a minimum GPA of 2.5 at the end of their third year B.Sc programme, can enter for the B.Sc. (Honours) Degree in Applied Sciences (Specialised in Economics) offered by the Resource Economics Unit. Students will be able to study advanced courses on applied economics under this programme and to complete their internship under economics, finance and statistics related institutions in both government and private sector.

Optional course units

-†-

A student may register for only one Internship Training/ Industrial Training course unit offered by any one Department.

EES

Electronic and Embedded Systems

Offered by the Department of Physics

“The Electronic and Embedded Systems course can best be described as a successful attempt to fulfill the national needs for advancements in the field of electronics, robotics and internet of things.”

B.Sc. Degree Programme with Electronics and Embedded Systems

Course Code: EES

Duration: 3 Years

Subject Combinations: Please see pages 146-151

For whom?

This proposed course is geared towards physical stream students interested in pursuing carriers in

Physics and Electronics and Embedded Systems. Consideration will be given to the students who are selected by the University Grant Commission (UGC). It is expected that Electronics and Embedded Systems combined with Physics and Mathematics provide an innovative combination in order to graduate with essential knowledge, specific expertise and skills related to the national needs. The intake is limited to a maximum of 30 students per academic year.

Career opportunities

The majority of students who are completing the B.Sc. General degree tend to seek job opportunities in academia as well as in industry. Therefore, a general degree program which is focused on producing graduates with more practical knowledge will certainly be of high demand. Also, with the rapid development of technology, automation, internet of things, and robotics applications are integrated in to our lives as in telecommunication, health systems,

entertainment, security, etc. Therefore, the emerging employment trends seek for graduates with knowledge in Electronics and Embedded Systems to develop automation, robotics and internet of things projects. The proposed Electronics and Embedded Systems course will be structured in a way that the students will gain knowledge in demanding fields thus opening new avenues of employment for science graduates.

Course overview

The developed curriculum of the Electronics and Embedded Systems program is structured to provide the prospective students a solid foundation of theory and practical in Physics, Electronics and Mathematics during their first two academic years. Therefore, the students to follow this undergraduate subject should select the combination containing Physics, Mathematics, and Electronics and Embedded Systems. The third year of study is emphasized more on application oriented courses thus included course units in embedded electronics, internet-of-things (IOT), robotics, instrumentation, and automation.

Course structure

The Electronics and Embedded Systems Course is designed as a three years degree course which will focus on laboratory practical sessions while covering undergraduate level Physics and Mathematics. The students are required to take course units in Electronics and Embedded Systems with a minimum cumulative credit value of 27.0 during the three years. The course units comprise of 'compulsory', 'core', 'non-core', 'optional' subjects so that the students are provided with the Electronics and Embedded Systems stream while allowing some level of flexibility to pursue optional interest.

Electronic and Embedded Systems

B.Sc. Degree Course Units

Each student should take course units having a minimum cumulative credit value of 27.0

FIRST YEAR

Semester I

EES 111 2.0	Fundamentals of C Programming	c
EES 112 2.0	Probability and Statistics	c
EES 118 1.0	Electronics and Embedded Systems Lab	a

Semester II

EES 121 2.0	Embedded Linux Systems	c
EES 123 1.0	Seminar	c
EES 106 1.0	Electrical Machines	c
EES 128 1.0	Circuit Simulations and Design Lab	a

SECOND YEAR

Semester I

EES 201 1.0	Sensors and Actuators	c
EES 209 1.0	Computer Integrated Control Systems	c
EES 211 2.0	Data Analysis and Modeling	c
EES 212 1.0	Embedded Systems Mini Challenge	a

Semester II

EES 206 2.0	Advanced Analog and Digital Electronics	c
EES 207 2.0	Data Acquisition and Signal Processing	c
EES 208 1.0	Data Acquisition and Signal Processing Lab	a

THIRD YEAR

Semester I

EES 313 2.0	Microprocessors and Microcontrollers	c
EES 302 1.0	Circuit Fault Diagnostics	c
EES 303 1.0	Embedded Systems Development Lab	a
EES 308 1.0	Introduction to Programmable Logic Controllers	o
EES 314 2.0	Project (Sem I and Sem II)	o

EMF

Environmental Management and Forestry

Offered by the Department of Forestry and Environmental Science

“Environment Management involves making the environment healthier by protecting the environment and related resources and promoting sound ecology and management practices”

B.Sc. Degree Programme with Environmental Management and Forestry

Course code: EMF

Duration: 3 Years

Subject combinations: Refer pages 146-151

For whom?

Students from both biological and physical science streams who are interested in pursuing careers related to environment or natural resource management

and forestry. The intake is limited to maximum of 80 students in an academic year.

Career opportunities

With the environment becoming an essential component in decision making, there is a rising demand for competent graduates in environment related professions. The course in Environmental Management and Forestry will take you on to diverse and rewarding careers in government ministries, non-governmental organizations, environmental and

business consultancies, public sector organizations, and manufacturing and service industries in the private sector.

Course overview

The concept of sustainable development, which aims to harmonize the economic, social and environmental dimensions of development strategy, has now become a key aspect of policy making by governments throughout the world. As such, an indepth knowledge in environment, natural resources and their management is likely to provide one with an added advantage in the modern competitive career market. Environment Management and Forestry course is aimed at equipping students with knowledge and skills in arrange of key disciplines related to forestry and environment, along with employability skills such as communication problem solving, team work, self-direction and leadership.

The study of Environmental Management is not just about progressing you way towards obtaining a degree. It is more importantly about providing you with a solid base in fields of forestry and environment, and enabling you to make the right choice in the best interest of the society and environment. With such a solid foundation, graduates will be able to develop and implement best practice strategies for natural resources management in the public and private sectors.

Course structure

Environmental Management and Forestry will constitute one third of the B.Sc. (General) degree program in a permitted subject combination. Students are required to take course units in EMF having a minimum cumulative credit value of 27.0. These include compulsory, core, and elective course units. Compulsory, and core course units are designed to

provide students with essential knowledge and skills that are required in forestry and environmental management. The industry- based assignment/ training project in the third year allow students to get hands in the third year applying the concepts they learned in the class room while providing an invaluable opportunity to further strengthen their work-ready skills.

B.Sc. Honours Degree in Environmental Management and Forestry

Duration: 4 Years

For whom?

The B.Sc. Honours Degree is aimed preparing a new breed of experts in the field of forestry and breed of experts in the field of forestry and environment with insight, skills, knowledge and ability to appreciate all aspects in decision making for sustainable management of natural resources.

Course overview

The core curriculum is designed to provide students with in-depth knowledge, skills and a broader perspective of forestry and environmental management that is demanded by the industry. The final year research project helps students to sharpen their scientific reasoning, research and analytical skills, and make them prepare to take up research and academic careers. The degree is recognized by many universities in Europe, U.S. and Australia, thereby

providing an ideal framework to obtain research positions and PhD studentships abroad.

Selection Policy

Selection of students to follow the B.Sc. Honours Degree in Environmental Management and Forestry is based on student's performance in the first two academic years. The intake is typically limited to a maximum of 12 students to ensure a personalized attention the guidance to each student.

Mode of Instruction and assessment

Students enrolled in both B.Sc. General and Honours Degree programs will be taught by an academic staff with an established track record, who appreciate the necessity of an integrated approach for the management and use of the world's environmental resources. The modules include lecturer, tutorials, laboratory practicals, field classes and individual and group project/ assignments. These are assessed through end-of-semester written examinations, practical tests, presentations and reports. There is an emphasis on analysis of real problems, with practical case studies to reinforce learning. This provides the tools required for the group and individual project.

FST

Food Science & Technology

Offered by the Department of Food Science and Technology

“Food Science is the study of physical, biological and chemical components of food and the concepts of food processing. Food Technology is the application of the above for preservation and safe use of food”

B.Sc. Honours Degree Programme in Food Science and Technology

Course Code: FST

Duration: 4 years

For whom?

Biological Science students who are selected by University Grants Commission (UGC) through a special window. The intake is limited to maximum of

60 students per academic year.

Opportunities

There is a big demand for FST graduates in food ingredient manufacture, food plant equipment and packaging manufacture, food service, government administration/ food legislation/ food technology, public analysts in laboratories, environmental health department, trading standards and department, journalism/ information service, research and

education institutes and associations, overseas locations (food sector), and consulting (local and international).

Course overview

The B.Sc. Honours Degree in Food Science and Technology has been designed to enable the prospective FST graduates to be able to demonstrate excellence in their future professions through transferring the knowledge and practical skills related to all subjects and facilitating to apply both theoretical knowledge and related practical skills appropriately in different situations. It is also expected that they will develop their technical competencies in order to meet any challenging situation in the food industry. The abilities and skills expected to transfer to the SJ P FST graduates through the degree programme include intellectual skills, practical skills, research skills, generic skills, numeracy skills, communication skills with special emphasize on scientific communication technology skills (ICT), interpersonal team work skills, self management and professional development skills.

Course structure

Students are required to take course units in FST having a cumulative credit value of 120. These include compulsory, core and elective course units. In addition, the student are also offered non-credit base course units throughout the course. Compulsory and core course units are designed to provide student

with the knowledge essential in working in the field of Food Science and Food Technology of both. The In-plant training programme focusing of real world industrial exposure (in fourth year first semester) and graduate research project (in fourth year second semester) are two vital components to facilitate our undergrad in getting hands on experience and in applying the concepts they learned in the classroom into practices and research.

Mode of instruction and assessment

Students enrolled in both general and special degree programmes will be taught by academic staff with well-established track record. The medium of instruction is English. The course units include; lectures, assignments, individual and group project, field classes and laboratory practicals. They are assessed through end-of-semester written examinations, practical examination, presentations and reports.

B.Sc. Degree Programme with Food Science

Course Code: FSC

Duration: 3 Years

Subject Combination: Refer pages 147-153

For whom?

This course is for students from the Biological Science stream who are interested in pursuing careers in Food Science. The intake is limited to a maximum of 30 students per academic year.

Career opportunities

Food Science and Technology is a fast growing and diversifying industry. Graduates offering FSC as a subject have many opportunities to apply their knowledge to solve problems associated with food packaging, shelf-life, etc.

This course is aimed at equipping students with knowledge and skill in a range of key disciplines related to Food Science along with employability, skill such as ICT, problem solving, team work, self-management and professional development.

Course structure

Food Science will constitute one third of the B.Sc. (General) degree programme. Students are required to take course units in FSC having a minimum cumulative credit value of 30. These include compulsory, core and optional course units.

GMB

Genetics & Molecular Biology

Offered by the Genetics & Molecular Biology Unit

“Genetics is central to all biological sciences, which when combined with knowledge on Molecular Biology techniques has a variety of multidisciplinary applications”

B.Sc. Degree Program with Genetics & Molecular Biology

Course code: GMB

Duration: 3 years

Subject combinations: Genetics & Molecular Biology, Chemistry, Biology (Please refer pages 146-147)

For whom?

Biological Science stream students who are interested

in pursuing research-based careers in academic, technological and industrial organizations. The intake is limited to a maximum of 35 students in an academic year. The selection of students is based on the highest Z-scores from the GCE Advanced level examination.

Career opportunities

This program is designed to provide basic and practical knowledge of Genetics and Molecular Biology which is a subject scarce in Sri Lanka, thereby producing capable professionals to get employment

in a spectrum of fields. The ideal graduate of the program will have a sound foundation in Genetics and be competent in Molecular Biology techniques, opening doors for them in many arenas. Genetics is pivotal to all biological sciences and is an evolving field, thus allowing graduates of this field to be employed as scientists in a vast variety of areas such as crop production, insecticide development, animal well-being and production, and identification of genetic disorders. As the necessity for introducing Genetics and Molecular Biology to schools and other institutions is being recognized, the need for qualified

personnel to teach the curriculum will arise, and graduates of this program will be well suited for the role. The design of the program and the professional network of the academics of the program make those interested in pursuing higher studies in related fields well positioned to do so at renowned institutions worldwide.

Course overview

This program is introduced with the objective of creating well-rounded individuals, and the curriculum

is designed to cater to this. Starting with basic courses such as Fundamentals of genetics, Molecular cell biology, and Molecular genetics, and gradually feeding into advanced courses such as Gene expression and regulation, Bioinformatics, Genomics and proteomics, the curriculum for the program is diverse and covers many areas of interest. The students will also have the opportunity to get industrial training in related areas giving them much-needed exposure to standing out in the competitive job market. The courses are designed not only to deliver knowledge but also to bring out hidden facets such as creativity and leadership. A key feature of the program is the opportunity for students to be inventors through a student-led project in the third year, where they will identify a need and develop a product or service to fulfill it. Not only will this allow students to put into practice what they have learned, but will also create individuals who are independent and can take initiative.

Course structure

Students following the B.Sc. degree will acquire 30 credits each from Chemistry, Biology and Genetics and Molecular Biology subject combinations during the three years totaling 90 credits at graduation. Course units are classified as compulsory, core and optional and are designed to provide the students with basic and specialized knowledge and skills required in the field.

B.Sc. (Honours) Degree Program in Genetics & Molecular Biology

Duration: 4 years

Career opportunities

The main objective of the B.Sc. (Honours) Degree Program in Genetics & Molecular Biology is to produce a cohort of students who have in-depth knowledge and hands-on experience in advanced areas of Genetics and Molecular Biology. The Honours curriculum is designed in a way the students will acquire specific knowledge, practical experience, and soft skills that set them apart from other Science graduates in Sri Lanka. Therefore, they will be able to confidently pursue higher studies in a related field. They will have immense opportunities around the world as academics and researchers in a diverse range of fields.

Course overview

Students following the B.Sc. (Honours) degree will acquire 20 credits each from Chemistry, Biology and Genetics and Molecular Biology subject combinations during the first two years totaling 60 credits. The remaining 60 credits will be acquired from level 6 courses in Genetics and Molecular Biology during the third and fourth years totaling 120 credits by graduation.

Selection

The ten students with the highest GPA at the end of the first two years will be selected to follow this program. The minimum GPA is 3.5.

B.Sc. (Honours) Degree Program in Applied Sciences (Genetics & Molecular Biology)

Duration: 4 years

Career opportunities

The main objective of the B.Sc. (Honours) Degree Program in Applied Sciences (Genetics & Molecular Biology) is to provide students who wish to pursue a career in the industry an opportunity to gain extensive industrial training. Moreover, since the duration of the degree is four years, these students are also well positioned to pursue a Ph.D. in Sri Lanka or abroad if they wish to do so.

Course overview

Students following the B.Sc. (Honours) degree in Applied Sciences (Genetics and Molecular Biology) will acquire 30 credits each from Chemistry, Biology and Genetics and Molecular Biology subject combinations during the first three years totaling 90 credits. The remaining 30 credits will be acquired from courses offered by the faculty (12 credits), the Genetics and Molecular Biology Unit (10 credits) and industrial training (8 credits) during the fourth-year totaling to 120 credits by graduation.

Selection

The five students with the highest GPA at the end of the first five semesters will be selected to follow this program. The minimum GPA is 3.0.

Please refer to page 146-147 for more details.

Mode of instruction and assessment

The academic staff of the unit is committed to providing a well-rounded learning experience. Lectures and practicals will be conducted in English and relevant course material will be uploaded on LMS, the online learning management system. Courses are designed such that students get a solid foundation, hands-on laboratory experience, and an opportunity to bring out their hidden talents. Learning is a multifaceted process and students will be continuously assessed via interactive classroom discussions, presentations, individual and group projects, and semester-end written and practical examinations.

ICH

Industrial Chemistry

Offered by the Department of Chemistry

“Industrial Chemistry is the link between academic research and industrial scale physical and chemical processes which transform raw materials into products that are beneficial to mankind”

B.Sc. Honours Degree in Industrial Chemistry

Course code: ICH

Duration: 4 years

Subject combinations : refer pages 146-151

For whom?

The main objective of the B.Sc. Honours degree in Industrial Chemistry program is to prepare the prospective students as industrial chemists and

introduce them to the basic attitudes and skills that would be required for their work in industry.

Career opportunities

The B.Sc. Honours Degree in Industrial Chemistry, offered by the Department of Chemistry is aimed at training professionals in the field of chemistry to develop skills required of chemists who will be working in industry. The strong foundations laid by the program would enable the students to seek

employment at industries as R&D manager, bench scientist, technical support specialist, or in quality control/quality assurance work. In addition to that, students also can acquire postgraduate qualifications from recognized universities which would lead to a career path in academia in universities and other institutions.

Course overview

The courses offered in the industrial chemistry honors degree program play an important role in the development of skills required of chemists who intended to be working in industry. In this regard, all courses are designed to bridge the industry-academia skill gap and also introduce more applied chemistry into the degree program in addition to the courses that offer fundamentals of chemistry

Course structure

The industrial chemistry Honours degree students in their third year follow advanced theoretical courses in the core subject areas: organic, inorganic, physical and analytical chemistry, while fourth year students follow applied chemistry courses designed to address the needs of modern knowledge-based industries. Students in the fourth year are also required to carry out an industrial process oriented research project.

The research project helps the students to apply their chemistry knowledge to industrial processes. In addition, students enhance their scientific reasoning, research and analytical skills which prepare them to

become chemists who have a good understanding of both chemistry and chemical engineering concepts. At the end of the research project, a dissertation is submitted for assessment, which is evaluated after an oral presentation followed by a viva voce examination.

Selection

Selection of the students to follow the B.Sc. Honours degree in industrial chemistry is based on the student performance in the first two academic years. The intake is typically limited to a maximum of 10 students.

Mode of instruction and assessment

The modules include lectures, tutorials, laboratory practical, industrial visits and individual and group projects and assignments. They are assessed through end-of-semester written examinations, practical tests, presentations and reports. There is an emphasis of analysis of real industrial problems to reinforce learning. For the practical class, assessment will include attendance, record book and a practical exam. A minimum of 80% attendance will be an essential requirement for completing the practical component.

For further information please contact:

Dr. Laksiri Weerasinghe
Course coordinator

ICT

Information & Communication Technology

Offered by Department of Computer Science

“Information and Communication Technology stresses on unified communication and integrating telecommunication devices, computers and software, all of which allow users to access, store, transmit and manipulate information”

B.Sc. Degree Program with Information and Communication Technology

Course Code: ICT

Duration: 3 Years

Subject Combinations: Refer pages 146-151

For whom?

Physical Science Students who are selected by the University Grants Commission (UGC) through a

special window. The intake is limited to a maximum of 50 students per academic year.

Career opportunities

The business enterprises that use computers on a large scale — such as banks, insurance companies, the electronics industry, central and local government, and management offer employment opportunities to graduates with ICT skills. Graduates spend their time on software development, computer systems support and business environment.

Course overview

Learning ICT is about understanding computer systems and applying them when seeking automated solutions. This includes both software and all its related hardware. This course concentrates on creating links between theory and practice. It covers a wide variety of software technologies and their application. Students are introduced to a range of programming paradigms, including procedural programming and object oriented programming. Other disciplines such as software engineering, net centric computing, visual computing and multimedia technologies are also covered. The syllabus offered by the department covers a vast area of the subject and is revised regularly to include the most recent developments.

Course structure

ICT will constitute one third of the B.Sc. (General) degree program in allowed subject combinations.

Students are required to take core course units in ICT having a minimum cumulative credit value of 27.0. These course units are designed to provide student with essential knowledge in theory, practice and skills that are required in ICT industry.

Mode of instruction and assessment

Students will be taught by academic staff with good track records. The medium of instructions is English. The course units include; lectures, assignments, individual/ group projects and laboratory practical. They are assessed through continuous assessments, end of semester written examinations, practical examinations, presentations and reports.

MAN

Management Science

Offered by the Department of Mathematics

“Management Science involves developing and applying models and concepts to understand and solve managerial problems”

B.Sc. Degree Programme with Management Science

Course Code : MAN

Duration : 3 Years

Subject combinations: Refer pages 146-151

For whom?

Management science study stream can be selected by both physical science and bio-science stream students who are interested in enhancing their capabilities

in management and administration of business organizations.

Career opportunities

Individuals are taught how to work with a team in order to achieve some pre-defined goals and targets of the respective organizations utilizing human resources, financial resources, natural resources and technological resources. Following the course will offer graduates excellent career opportunities in different fields of management including accounting,

banking, finance, international business, human resources and marketing.

Course overview

Management science course units offered in our faculty may provide an applied approach to understanding business and management and the context in which they operate. This programme further offers students a wide range of management stream subject areas whilst requiring them to carryout researches relating to course areas to enhance their knowledge on business world. We believe that the flexibility and academic rigour of this degree will make it very attractive to students and employers which enable students to exploit most of their strengths and interests.

Course structure

The management science course units focus on the study of key disciplines, such as Management, Accounting Processes, Economics, Statistics, Operations Research, Forecasting, Marketing and Organizational Behaviour. Of the total of 31

credits, a cumulative credit value of 27 is required to be completed at the end of 3rd year. This include compulsory and optional course units.

Mode of instruction and assessment

The Faculty of Management Studies and Commerce render their expertise and support to conduct the lecture series. Management Science uses higher order assessment activities which include interactive learning sessions, tutorials, end semester examinations and individual and group assignments to better reflect what undergraduate students can really do to demonstrate their learning growth. These assessments may test cognitive processing skills of students with regard to task-based problem-solving and decision making skills.

MAT

Mathematics

Offered by the Department of Mathematics

“Mathematics is the Queen of modern science and is an efficient source of useful concepts and tools that are used to understand reality”

B.Sc. Degree with Mathematics

Course Code: MAT

Duration : 3 Years

Subject combinations: Refer pages 146-151

For whom?

Students from physical science stream who are interested in science and technology-oriented careers with sharp logical thinking skills in Mathematics.

Career opportunities

Mathematics has now found an increasingly significant influence in many diverse fields, from management to medicine. Mathematics related professionals are in high demand worldwide in various capacities in academic institutes, research institutes and engineering and technical sectors.

Course overview

Scientific and industrial progress in recent years

has made Mathematics one of the most important subjects of our time. An undergraduate degree in Mathematics will open the way to a future filled with wide opportunities for jobs and professions. Furthermore, Mathematics alone will enable a person to make a positive contribution to the society. Mathematics is, in addition to being the language of science in its own right, a way of logical thinking rather than rules and regulations.

Course structure

Mathematics offered as one of the three subjects for B.Sc. degree in a permitted subject combination for physical science students. This contains compulsory and optional course units which are designed to provide required knowledge of main areas of Mathematics such as Algebra, Analysis, Calculus and so on. Further, due to the high demand for computational mathematics, the department has introduced a practical component to most of the Mathematics course units in the department with the students having access to a well-equipped computer laboratory. Also the department offers a basic Mathematics course for the biological students.

B.Sc. Honours Degree in Mathematics

Duration: 4 years

For whom?

This degree is aimed at students who wish to grasp

the key aspects of Mathematics and who wish to study Mathematics in depth.

Career opportunities

A special degree in Mathematics enables graduates to find employment as professionals in academic institutes, research personnel, experts in engineering and technical sector, actuarial scientists and statisticians.

Course overview

The four year B.Sc. Honours degree in Mathematics is designed to provide a strong foundation on advanced topics in Mathematics emphasizing on the power and the beauty of abstract and rigorous reasoning that Mathematics promotes. On the one hand the Honours degree program focuses on developing student's appreciation for mathematics, and creating individuals who are self-motivated and are well prepared to pursue higher education in Mathematics. At the same time the program offers a range of practically applicable mathematics courses, ensuring that students who are interested in acquiring the mathematical expertise required to excel as professionals in industrial or financial sectors are equally well catered.

Course Structure:

The core course units offered in the Mathematics Honours degree program provide the mathematical knowledge and skills that will be highly valuable for

any student who wishes to pursue a career that is extensively Mathematics oriented. To allow students the freedom to select courses that suit their subject interests and career ambitions, special degree students are also offered a number of optional course units in both the third and the fourth years. The department has also integrated practical components and student presentations as methods of assessment to several Honours degree courses, and has provided the Honours degree students with generous access to a well-equipped computer laboratory. To give the special degree students an exposure to the world of Mathematics outside the academia, department offers an industrial training unit for a fixed duration in the third year. The fourth year individual project that every special degree student is required to conduct under the supervision of a lecturer in the

department provides students a research experience/ an opportunity to do an intensive independent study on a topic of their interest.

Selection

Promising students are selected for the B.Sc. Honours degree in Mathematics at the end of the second year, based on their performance in Mathematics courses, with an acceptable level of performance in other two subjects

Instruction and assessment

Please refer pages 257 - 275 for necessary information.

Head/Department of Mathematics
E mail: sarath@sjp.ac.lk

Mathematics

B.Sc. Degree Course Units

Each student should take course units having a minimum cumulative credit value of 27.0

FIRST YEAR

Semester I

MAT 111 2.0	Fundamentals of Logic and Set Theory	c
MAT 112 2.0	Differential Equations	c
MAT 113 1.0	Complex Numbers and Vectors	c
MAT 119 0.0	Mathematical Software I	c
MAT 114 1.0	Basic Mathematics	o [#]

Semester II

MAT 121 2.0	Linear Algebra I	c
MAT 122 2.0	Calculus	c
MAT 123 1.0	Vector Calculus	c
MAT 129 0.0	Mathematical Software II	c

SECOND YEAR

Semester I

MAT 211 1.0	Linear Algebra II	c
MAT 212 2.0	Real Analysis I	c
MAT 213 2.0	Numerical Methods	c

Semester II

MAT 221 2.0	Functions of Several Variables	c
MAT 222 2.0	Partial Differential Equations	c
MAT 223 1.0	Basics of Number Theory	c

THIRD YEAR

Semester I

MAT 311 2.0	Complex Analysis	c
MAT 312 2.0	Computer Programming	c*
MAT 313 1.0	Introduction to History of Mathematics	c
MAT 314 1.0	Teaching and Learning Methodologies in Mathematics	o
MAT 315 2.0	Boolean Algebra and Switching Circuits	o

Course Type

-c-

MBL Microbiology

Offered by the Department of Botany

“Microbiology is an applied science that investigates and harnesses the industrial potential of microscopic organisms for a wide-spectrum of beneficial applications in agriculture, medicine and related fields such as the environment and food industry”

B.Sc. Degree Programme with Microbiology]

Course code: MBL

Duration: 3 Years

Subject combinations: Refer pages 146-151

For whom?

Biological science stream students who are interested in pursuing careers in academic, technological, industrial or environmental organizations. The

intake is limited to a maximum of 60 students in an academic year. Minimum number for the course is 20 in an academic year.

Career opportunities

The spectrum of jobs available for microbiology graduates include employment in fields such as, quality assurance, environmental surveillance and monitoring, food and beverage industries, research, secondary school teaching, veterinary sciences,

biofertilizer industry and agriculture, crop protection and medicine and the pharmaceutical industry.

Course overview

Microbiology is a far more exciting area of science as it investigates the unseen world around us. Although it is a very broad subject, throughout much of its history microbiology focused on three areas, fermentation, food and medicine. Manipulation of genetic information of microbes for the large-scale production of beneficial products including antibiotics, beverages, biological catalysts and hormones, has unleashed the potential of microorganisms to transform basic substrates to invaluable yields of products, within the realms of medicine, agriculture and industrial applications.

The discipline microbiology, which was originally heavily dependent on the culture of microorganisms, has evolved with the advent of time, to incorporate molecular biology and genomics techniques for the identification and characterization of individual microorganisms from microbial assortments found within diverse ecological niches. In spite of the advances made in applied microbiology in the last two decades, the field of microbiology is largely an untapped discipline with virtually unlimited potential as many microbes are to be discovered and studied.

Course structure

The subject Microbiology constitutes one third of the B.Sc. (General) degree program in an allowed

subject combination. All students who wish to offer microbiology will have to follow common compulsory and core course units during the first three semesters of the degree programme prior to the selection of microbiology as their chosen field of study. At the end of three years, total credit value gained by a student who has opted for general degree following a particular course should not be less than 27.0. A student can also opt for a special degree spending an additional year offering more advanced areas pertaining to respective subjects they have selected.

B.Sc. Honours Degree Programme in Microbiology

Duration: 4 Years

Career opportunities

The career opportunities available for graduates of the Honours Degree Program in Microbiology, will be centered on academia as well as practicing their trade as researchers in a diverse range of hierarchical positions undertaking in depth studies on contemporary research topics with the objectives of bridging gaps in knowledge and unraveling uninvestigated areas of Applied Microbiology.

Course overview

The department offers special degree programs in Microbiology for a few students with the intention of producing graduates having an in-depth knowledge, better skills and competent in handling various aspects of the subject selected. The core curriculum

of the special degree program is designed to provide advanced knowledge in the subject and simultaneously to impart hands-on experience in the world of work through an industrial training program in a government research institute or in a private sector organization for a short period of time. The final year research project assists students to improve problem solving ability, critical thinking, and time management, thereby preparing them to become professionals.

Selection

Selection of students to follow a Honours degree in Microbiology is based on their performance during the first two academic years. The intake is limited to a maximum of 10 students per course.

Instruction and assessment

Through the knowledge and experience of academic staff of the Department of Botany and of visiting staff, we endeavor to expose students to a range of teaching and learning activities, based on the course units identified under each of the subjects offered by the department. The modules conducted include lectures, laboratory practical classes, tutorials, field classes, individual and group assignments / projects. Majority of these modules are assessed through semester end theory examination, practical examination, presentations and reports/ theses, while a few are assessed continuously.

For further information please contact:

Dr. M.L.A.M.S. Munasinghe
Head/Department of Botany

PBT

Plant Biotechnology

Offered by the Department of Botany

“Plant Biotechnology is an applied science that is centered on harnessing beneficial genes from plants to produce a host of helpful functions for human well-being”

B.Sc. Degree Programme with Plant Biotechnology

Course code: PBT

Duration: 3 Years

Subject combinations: Refer pages 146-151

For whom?

Biological science stream students who are interested in pursuing careers in academic, technological,

industrial or environmental organizations. The intake is limited to a maximum of 60 students in an academic year. Minimum number for course is 20 in an academic year.

Career opportunities

As the country is forging ahead to be the economic hub of Asia, graduates in Biotechnology will definitely have a variety of rewarding careers in both public and private sector establishments. Qualified

biotechnologists are needed across many sectors, including academic, technological, industrial and environmental organizations. In particular, the demand for biotechnology graduates is high within the fields, medicine and agriculture, where the tinkering of genes to maximize the beneficial traits of the gene products, takes precedence. In addition, with the strengthening of the 'transgenic' wave in agriculture, there will be even more opportunities for biotechnology graduates to embark on fruitful careers in the area of contemporary biotechnology.

Course overview

The rapid growth of biological knowledge is placing its prominence among other sciences. Currently there are many real-world problems that entail plants: escalating pressure for food, the need for renewable energy resources, habitat preservation are being driven by the ever growing human population. In order to overcome these problems require detailed knowledge of life's component parts at every level from molecules to ecosystems.

Biotechnology is the practical application of biological science to improve the lives of humans and quality of the environment, by exploiting the potential of biological organisms as 'factories' or 'bio-industrial units' capable of manufacturing invaluable products, including food, pharmaceuticals, nutraceuticals, vaccinations, hormones, enzymes and miscellaneous biological agents. Many of these applications are not

new but through the understanding of the genetic code followed by genetic engineering, biotechnology has turned out to be an exciting and fascinating field of science. It is only through Biotechnology that it would be possible to overcome the twenty first century real-world problems.

Course structure

The subject biotechnology constitutes one third of the B. Sc. (General) degree program in an allowed subject combination. All students who wish to offer plant biotechnology will have to follow common compulsory and core course units during the first three semesters of the degree programme prior to the selection of plant biotechnology as their chosen field of study. At the end of three years, total credit value gained by a student who has opted for general degree following a particular course should not be less than 27.0. A Student can also opt for a Honours degree spending an additional year offering more advanced areas pertaining to respective subject they have selected.

PBL

Plant Biology

Offered by the Department of Botany

“Plant Biology is both a fundamental and applied science dealing with the structure, function, interactions, environment, evolution and taxonomy of plants”

B.Sc. Degree programme with Plant Biology

Course Code: PBL

Duration: 3 years

Subject combinations: Refer pages 146-151

For whom?

Biological science stream students who are interested in pursuing careers in academic, technological, industrial, or environmental organizations. The intake is limited to a maximum of 60 students in an

academic year. Minimum number for course is 20 in an academic year.

Career opportunities

The range of employment opportunities available for plant biology graduates include, as plant biologists, taxonomists, researchers, secondary school teachers, agriculturists, quarantine and border control agents, roles in western and traditional medicine, park rangers and tour guides, and employment in conservation and biodiversity projects.

Course overview

The study of plants is vital as they are critical for sustaining life on earth, through generation of oxygen and providing food and medicine for all life forms including man to exist. Plant Biology or Botany is the science of plant life including fungi, algae, and viruses. Plant biology began with early human efforts to identify edible, medicinal and poisonous plants, making it one of the oldest branches of science, which gets updated continuously. With high levels of malnutrition and deficiency diseases in diverse regions of the world including South Asia, there is a need to maximize the potential of food crops, to ensure that mouths are fed, and deficiency diseases are eradicated from the face of the earth. In order to harness the fullest potential of plants as manufacturing units of foods, biological processes that form the foundation of the vitality of plants, should be extensively studied and the labyrinths of interlocking biological pathways elucidated, which essentially requires the aptitude and dedication of a new breed of plant biologists.

Sri Lanka is a nation rich in endemic biodiversity and there is a vast amount of untapped resources to be harnessed from our unique assortment of flora found within our island shores. In order to reap the benefits of our endemic plant biodiversity, it is essential that a pool of graduates is developed with an in-depth knowledge in contemporary plant biology. Therefore, the discipline, plant biology, engineers a strong foundation for a student to impending pursue

a rewarding career while securing his/her interests in the appreciation of the diversity in plant life.

Course structure

The subject plant biology constitutes one third of the B.Sc. (General) degree programme in an allowed subject combination. All students who wish to offer plant biology will have to follow common compulsory and core course units during the first three semesters of the degree programme prior to the selection of plant biology as their chosen field of study. At the end of three years, total credit value gained by a student who has opted for general degree following a particular course should not be less than 27.0. A student can also opt for a Special degree spending an additional year offering more advanced areas pertaining respective subject he/she has selected

B.Sc. Honours Degree Programme in Plant Biology **Duration: 4 years**

Career opportunities

The career opportunities available for graduates of the Honours Degree Program in Plant Biology, will be centered on academia as well as practicing their trade as researchers in a diverse range of different positions undertaking in depth studies on contemporary research topics with the objectives of bridging gaps in knowledge and opening investigated areas of fundamental Plant Biology.

Course overview

The department offers Honours degree programs in Plant Biology for few students with the intention of producing graduates having an in- depth knowledge, better skills and competent in handling various aspects of the subject selected. The core curriculum of the Honours degree program is designed to provide advanced knowledge in the subject and simultaneously to impart hands-on experience in the world of work through an internship program in a government research institute or in a private sector organization for a short period. The final year research project assists students to improve on problem solving ability, critical thinking, and time management and there by preparing them to become professionals.

Selection

Selection of students to follow an Honours degree in Plant Biology is based on their performance during the first two academic years. The Plant Biology

Honours degree intake is limited to a maximum of 10 students and a minimum of 05 students per course.

Instructions and assessment

Through the knowledge and experience of academic staff of the Department of Botany and of visiting staff, we endeavor to expose students to a range of teaching and learning activities, based on the course units identified under each of the subjects offered by the department. The modules conducted include lectures, laboratory practical classes, tutorials, field classes, individual and group assignments/ projects. Majority of these modules are assessed through semester end theory examination, practical examination, presentations, and reports/theses, while a few are assessed continuously.

PHY Physics

Offered by the Department of Physics

Physics is a creative activity of human mind. Studying Physics provides you with a delightful and a rewarding experience that will make you suitable for any future career.

B.Sc. Degree programme with Physics as a subject

Course Code: PHY

Duration: 3 years

Subject combinations: Refer pages 146-151

For whom?

The course is primarily for the students of physical science stream who are interested in studying physics and are hoping to pursue knowledge and skills to

succeed in a career in science, education, industry and in management. The Department also welcomes students with a biological science background, who are seeking career opportunities where both physics and biology are involved, to read physics as a subject. They are even eligible to read for a Special Degree in Physics provided they reach the required standard.

Career opportunities

The Bachelor of Science General Degree is designed to provide you with the necessary knowledge and skills

to succeed in the career of your choice. Opportunities include positions in scientific and educational services, position in industry etc. The B.Sc. Degree could open doors to these possibilities and many more.

Course overview

Physics is a natural science which encompasses a vast array of sub-fields ranging from the Solid state and sub-atomic regimes like Nuclear and Quantum physics to the study of the universe through Relativity and Astrophysics and the everyday applications such as Electronics and Optics.

A degree in physics offers you not only the subject knowledge but also the tools to be creative and think differently. It equips you with the analytical and personal skills that are essential for personal development, for any path you decide to take in the future.

Course structure

The Bachelor of Science General Degree spans over three years. The students are required to take course units in Physics with a minimum cumulative credit value of 27.0 during the three years. The course units comprise of 'compulsory', 'core', 'non-core', 'optional', subjects so that the students are provided with the core knowledge of the physics stream while allowing some level of flexibility to pursue optional interest.

B.Sc. Honours Degree in Physics

Duration: 4 years

For whom?

The Honours Degree programme is aimed at the students who are interested in taking Physics as a career and would like to pursue an academic/research line in the future.

Course overview

The B.Sc. Honours degree caters to those of you who are fascinated by the beauty of physics and hope to pursue an academic and research career. However, this is well-balanced by some practical courses including an industrial placement scheme which exposes the students to the industrial and scientific environment of the country.

Course structure

The students are required to take course units in Physics with a minimum cumulative credit value of 30.0 each in the third and fourth years. The course units consist of 'compulsory', 'core' non- core', 'optional', subjects so that the students are provided with the core knowledge of the physics stream while allowing some level of flexibility to pursue optional interest.

Selection policy

Selection of students to follow the B.Sc. Honours Degree in Physics is based on student's performance in the first two academic years. The intake is typically limited to a maximum of 18 students.

Mode of instruction and assessment

Students enrolled in both General and Honours Degree programs will be guided by academic staff with established track record. The modules include lectures, tutorials, laboratory practicals, individual and group projects, seminars, internship, and assignments. These are assessed through end-of-semester written examinations, practical examinations, presentations, and reports.

For further information please contact:

Prof. N.G.S. Shantha Gamage
Head/ Department of Physics
E-mail: head.physics@sjp.ac.lk

Physics

B.Sc. Degree Course Units

Each student should take course units having minimum cumulative credit value of 27.0

FIRST YEAR

Semester I

PHY 101 1.0	Fundamentals of Electronics (Unaudited Unit)	o
PHY 102 2.0	Mathematics for Bio Science Students-Semester I&II (Unaudited Unit)	o
PHY 103 2.0	Mechanics and Properties of Matter	c

PSC

Polymer Science

Offered by the Department of Polymer Science

“Polymer Science holds a unique place within material science as it creates useful materials by changing molecular scale properties of monomers and by applying different chemical and processing techniques, cater for a wide range of applications.”

B. Sc. Honours Degree Program in Polymer Science

Course code: PSC

Duration: 4 years

Career opportunities

This degree is designed for students to obtain an in-depth knowledge in polymer science and to thereby produce professionals for the polymer industry and

academia. As there are over five thousand polymer related industries including plastics, rubber, textile, etc. in Sri Lanka, the students who graduate with a degree in polymer science have a high opportunity to enter into the employment market and to contribute to the country's economy through research and development in the field of polymer science and by sharing their knowledge with the industries and helping these industries to prosper. Also, the program would open up great opportunities for student to

follow postgraduate degrees through research in recognized universities and research institutes in the world.

Course overview

B.Sc. Honours Degree Program in Polymer Science is designed to create competent graduates to meet

the demands of polymer related industries, research institutes and postgraduate institutes. The syllabus includes fundamentals of polymer science, more specialized and most recent advanced courses in the discipline along with a large number of optional courses in terms of polymer engineering and technology and other fields to meet the current

demand in the country. The program is also designed for students to develop a variety of different soft skills essential for their career success and to excel in a very competitive job market.

Course structure

First two years comprises of compulsory and core course units which would lay a foundation for them to specialize in polymer science and technology. Based on students' performance in the first two years, limited number of students will be selected to follow B.Sc. Honours Degree program in polymer science depending on the available resources. Courses in third and fourth years comprise of a large number of specialized core and optional courses for student to be an expert in the field of polymer science. The practical course units are specially designed to cover almost all the applications in the polymer industry with hands on experience to apply theoretical concepts that they learnt along with a number of industrial/field visits for students to experience how things related to polymer science are utilized in the world. Students are required to carry out a research project which would enable students to gather hands on experience on scientific research and to obtain a variety of soft skills such as analytical thinking and reasoning, problem solving, etc. through research in the fourth year. A dissertation will be evaluated through an oral presentation and viva voce examination.

Mode of instruction and assessment

The courses in the syllabus are delivered as lectures, tutorials, practicals, assessments, reports, projects, etc. The medium of instruction is English. The students are assessed through end semester examinations, practical tests, reports and presentations

For further information please contact:

Dr. Madhubhashini Maddumaarachchi

Head/Department of Polymer Science

PSC

Polymer Science and Technology

Offered by the Department of Polymer Science

“Polymer Science is a blend of organic chemistry, physical chemistry, material physics, statistical mathematics, and inorganic chemistry. Polymer Technology is a combination of polymer science, some aspects of chemical engineering, rheology, and reactor designing for polymerization, mechanical aspects and mould designing. Its interdisciplinary nature makes it a fascinating and challengeable subject”

B. Sc. Honours Degree Program in Polymer Science & Technology

Course code: PSC

Duration: 3 years

For whom?

Polymer Science and Technology is globally

established with a wide scope in cost effective and energy saving benefits for the sustainability of the modern era. Students from physical and bio science streams who have an interest in the field of polymer science and technology are eligible. The current intake is limited to maximum of 100 students per academic year.

Opportunities

Polymer industry has become a major contributor towards national economy since the early 1930's. The function of the University of Sri Jayewardenepura in workforce development in the Polymer industry is quite dominant. With the winning combination of a strong foundation of theoretical knowledge gained through three years of course units and practical hands-on experience, students find it easy to get established in the Sri Lankan polymer-based industries

as polymer chemists, technologists, technicians, and management personnel.

Course overview

The Department of Polymer Science University of Sri Jayewardenepura had developed into an active center of providing well educated and responsible young scientists in the field of Polymer Science and Technology. The subject is offered in such a way to provide mastery in scientific theory, technology,

initiative, and creativity in the field of Polymer Science and Technology. We are constantly striving to improve our policies and develop our curriculum, in such a way to awaken creativity while nourishing their minds with knowledge. Thus, many strategic activities such as frequent industrial seminars, industrial visits, curriculum developments, workshops, conferences and since of late, organizing an annual symposium are all part of the program.

Course structure

Chemistry, Physics and Polymer Science and Technology (PSC) are the three compulsory subjects for students who seek to join in the PSC program. Course units in chemistry, physics, and PSC of the first two years are compulsory and cover the core area of the subjects. Students in the PSC stream are eligible for special degree program in chemistry, physics, or Polymer Science if they can meet the criterion at the end of the second year. A range of optional course units are offered with industrial training in polymer-based industry for the students in the third year.

SSM

Sports Science & Management

Offered by the Department of Sports Science

Sports Science is a discipline that studies the application of scientific principles and techniques with the aim of improving sporting performance.

B.Sc. Honours Degree in Sports Science and Management

Course Code: SSM

Duration: 4 years

For whom?

Advanced level students in the stream of Arts/ Biological Science / Physical Science / Commerce/ Technology or any other combination (any three subjects) who have obtained the stipulated Z score

set for Sports Science and Management degree programme by the University Grant Commission. Maximum number of students admitted to this course will be limited to 90.

Career opportunities

Graduates in this field may be employed as physical education teachers, performance analysts, sports coaches, sports therapists, fitness center managers, sports administrators, strength and conditioning specialists or retail managers of sports

stores. Graduates may also be well positioned to undertake further training to become an accredited physiotherapist, exercise physiologist clinical exercise consultant or a dietitian/nutritionist.

Course overview

The study of Sport Science and Management incorporates areas of sports physiology, training principles, strength and conditioning, sports medicine, applied sports physiology, sports nutrition, sports biomechanics, sports management, practical knowledge of selected sports teaching and coaching practicals, etc.

Course structure

The Sports Science and Management degree is an Honours degree with full-time coursework consisting

of four academic years (eight semesters). Students need to complete 120 credits of coursework/research to qualify for award of the Bachelor of Science Honours in Sports Science and Management.

Modes of instruction and assessment

Assessment of course units are varied, and comprised a combination of coursework, continuous assessments and research reports and internship placements. Students are given the opportunity to give oral presentations as a part of formative assessment tasks and are encouraged to develop practitioner skills alongside academic skills through the use of different assessment methods.

For further information please contact:

Dr. S.Weerasinghe
Head/Department of Sports Science
E mail: sashie@sjp.ac.lk

STA Statistics

Offered by the Department of Statistics

Statistics is the study of collecting, analysing, interpreting and presenting data. “Statistical thinking will one day be as necessary for efficient citizenship as the ability to read and write”

- H.G. Wells (1866 - 1946) in his book ‘Mankind in the Making (1903)’-

B.Sc. Degree Programme with Statistics

Course code: STA

Duration: 3 Years

Subject combinations: Refer pages 146-151

For whom?

Students from physical science stream who are interested in pursuing careers in Statistics or related disciplines. The intake at present is limited to a

maximum of 120 students in an academic year.

Career opportunities

Graduates who follow Statistics as a subject are employed as statisticians, teachers, business analysts, quality assurance managers, banking officers, planning executives, etc.

Course overview

Statistics plays a vital role in all aspects of databased

investigations using well designed experiments and surveys to discover the patterns in data, and to determine the principal causes of important effects. It is the science of drawing reliable conclusions through data collection, analysis, interpretation and presentation under uncertainty. The theory and methods of statistics are essential in a wide variety of fields such as biology, economics, engineering, medicine, public health, psychology, marketing, education, and insurance. Our degree program provides a solid training in theory, methods, and applications of statistics which are necessary for both academia and industry where advanced knowledge is required. It is developed with a strong emphasis on industry-based skills, underpinned by sound scientific knowledge and understanding.

Course structure

A three-year program is offered to students who choose the above subject combinations. All first- and second-year courses are core units. These courses provide a solid foundation in Statistics and computational skills with an introduction to different fields of applications. Third year general degree students have a range of optional courses in applied areas. In addition to the essential theoretical knowledge, Statistics undergraduates are given an ample opportunity to collect and analyze data and prepare statistical reports related to real world problems. They also gain vital experience in solving real world problems through

the Statistical Consultancy Unit of the Department of Statistics which offers its services to both on campus and off campus researchers. Further, students are given plenty of opportunities for practical work using industry standard computer packages such as MINITAB, SPSS, R, Eviews, etc.

B.Sc. Honours Degree in Statistics

Duration: 4 years

For whom?

The honours degree program is designed for students who aspire to be leaders in various functional areas in statistics such as academia, research, government and industry.

Career opportunities

Statisticians are consistently rated among the top jobs when factors such as salary, working conditions, and interest are combined. In general, statisticians can easily fit into careers in any field. The public and private sector rely on statistical information for decision making, regulation, controlling and planning. Some major areas of applications of Statistics are the production of government statistics, pharmaceutical research, industrial quality management, risk assessment in insurance (actuarial statistics), environmental monitoring and assessment, medical research, etc.

Some of our past graduates holding honours degrees in Statistics are now employed as lecturers at various state universities and private educational institutes affiliated to foreign universities, while many others are employed as directors, managers, executive officers of state and private banks, group compliance and systems managers, project officers, logistic analysts, management trainees, research assistants, financial analysts, program assistants, etc. Some are pursuing higher studies abroad.

Course overview

The B.Sc. honours degree in Statistics is aimed at

preparing experts in the field of Statistics. Our degree provides a firm foundation in Statistics, together with relevant mathematical and computing knowledge required to pursue higher studies in Statistics related disciplines as our degree is recognized by many universities in Canada, Europe, USA, and Australia. Doctoral degree or similar postgraduate qualifications from a recognized university would lead the career path in academia in the widely expanding university system in Sri Lanka.

Course structure

The core curriculum offered under the honours

degree is an excellent preparation for careers where statistical, mathematical and computing skills are highly valued. The courses in the third year of the Statistics honours degree are all core units while in the fourth year a wider choice of specialized optional courses is offered. Throughout the curriculum, special emphasis is placed on the up-to-date applications of Statistics in industry.

Statistics honours degree students are required to complete a comprehensive guided project which is evaluated by an oral presentation followed by a viva voce examination. In addition, students undergo a four-month, full - time, industrial training. Further, they are provided with the opportunity to solve real world problems through the Statistical Consultancy Unit enabling them to gain experience as a statistical consultant.

Selection Policy

Selection of students for the B.Sc. honours degree in Statistics is based on student performance in the first two academic years. The number of students typically depends on availability of human and other resources in the department.

Mode of instruction and assessment

Students enrolled in both general and honours Degree programs are taught by highly skilled, knowledgeable academic staff who are up to date with current

applications of statistical methods. Most of the basic core teachings are provided through lectures while seminars and group tutorials offer the opportunity to discuss subject matter in greater detail and raise questions in a more informal setting.

Course units are assessed through mid and end of-semester written examinations, practical tests, quizzes, presentations, viva voce examinations, and reports. Diversified learning activities and assessment methods such as seminar presentations, individual and group assignments, case studies, individual and group projects are used to encourage active and participatory learning. This diversification helps to improve soft skills such as oral and written communication, teamwork and time-management skills demanded by the employers.

ZOO

Zoology

Offered by the Department of Zoology

Zoology is a branch of biology that is centered on the study of the structure, function, evolution, interactions, nutrition, environment, and taxonomy of the fauna of earth-the animal kingdom

B.Sc. Degree Programme with Zoology

Course code: ZOO

Duration: 3 Years

Subject combinations: Refer pages 146-151

For whom?

Students from biological sciences streams who are interested in pursuing careers in Zoology

Career opportunities

Sri Lanka is at heart a nation with a rich endemic biodiversity. In order to harness the potential of our island nation in biodiversity, it is important that a pool of talent is developed who are equipped with specialist and applied knowledge in Zoology. Simultaneously, Sri Lanka is a nation harboring a host of tropical communicable and deficiency diseases, which mandatorily necessitates a workforce equipped with applied scientific knowledge to undertake surveillance, research and extension activities

associated with the distribution of such debilitation conditions. Therefore, by the provision of skilled graduates in contemporary Zoology, the department contributes towards national development and the upliftment of communities through its alumni. The scope in Zoology is reasonably broad in its spectrum of employment opportunities with prospects of joining government ministries, private organizations, universities and education providers, hospitals, museums, secondary schools, consultancy firms as well as providing opportunity for entrepreneurship.

Course overview

The subject Zoology aims to provide a holistic learning environment in contemporary Zoology as a blend of specialist knowledge and applied laboratory and field studies, to ensure the all- round development of a student to suite the 21st century aspirations of our island nation. As a result, course units which are part of the modern learning environment imparted by the Department of Zoology include Limnology, Molecular Biology, Genetics, Nutrition, Wildlife and Conservation of Biodiversity, Microbial Ecology, Insect Pest Management, Fisheries and Aquaculture and Environmental Toxicology.

Outside of the key subject areas, students are equipped with communication and problem-solving skills, team work and perseverance and leadership qualities to ensure their career readiness to secure a future within the 21st century workforce.

Course structure

The subject Zoology will contribute one third of the B.Sc. degree program within the framework of a permitted subject combination. Students are required to take course units equaling or exceeding a cumulative credit value of 27.0 points. Course units are classified as compulsory, core and optional course units and the course units are designed to provide the student with specialist knowledge and skills required in contemporary Zoology.

B.Sc. Honours Degree Programme in Zoology

Duration: 4 Years

Career opportunities

The career opportunities available for graduates of the Honours Degree Program in Zoology, will be centered on academia, government ministries, consultancy firms and as well as practicing their trade as researchers at a diverse range of hierarchical positions undertaking in depth studies on contemporary research topics with the objectives of bridging gaps in knowledge and deciphering cryptic areas of fundamental Zoology.

Course overview

The B.Sc. Honours Degree in Zoology aims to prepare a new breed of experts with marketable and transferable skills in contemporary applied Zoology.

As the degree programme imparts a higher level of specialist knowledge and practical training, the Honours Degree program is ideally suited for students with aspirations for graduate studies and further research training.

The core strengths of the Honours Degree Programme are the coverage of specialist knowledge, both in-depth and with a wide spectrum of horizontal topics, the provision of a higher degree of practical skills which are transferable beyond the learning environment, higher levels of analytical and communication skills and in whole, a well-rounded education program suited for research endeavors or higher studies under specialist topics. The final year research project is of core significance to the Honours Degree Programme which advances a student's capacity to undertake research endeavors, develops core analytical skills, expand communication, networking and language skills and to pursue careers in academia.

Selection

Selection of students to pursue an Honours Degree Programme in Zoology, is based on the student's performance in the first two years of the academic programme and a limited number of students are selected based on the staff availability.

Instruction and assessment

The impartation of education to students enrolled in B.Sc. Programme and Honours Degree programme, will be conducted by an eminent group of lecturers, with proven track records in academia and research. The teaching environment within the Department of Zoology consists of lectures, laboratory practicals, field studies and project assignments which ensures the all-round development of students in specialist knowledge and practical training. The modes of assessment include end-of-semester examinations, practical tests, presentations and reports.

ASP/ ASB/ ASC B.Sc. (Honours) Degree in Applied Science (Four-year Extended Degree Programme)

Offered by the Faculty of Applied Sciences

The B.Sc. (Honours) Degree in Applied Sciences prepares students to be performance oriented to meet current global standards as well as to contribute to the socio-economic development of the country by combining academic excellence with practical experience

B.Sc. Honours Degree in Applied Sciences

Course Code: ASC/ASP/ASB

Duration: Additional 1 year

For whom?

This program is for students who have entered the faculty of Applied Sciences of University of Sri Jayewardenepura through either Physical, Biological or Polymer Science stream and completed their

general degree with a minimum GPA of 2.5 at the end of their third year B.Sc programme. It is a professional degree program, which is multidisciplinary in nature and offered by eight departments (Mathematics, Chemistry, Physics, Zoology, Botany, Forestry & Environmental Science, Statistics and Polymer Science) and the units (Resource Economics, Management science, Genetics & Molecular Biology) attached to those respective departments of the faculty. The extended year consists of course work

and industrial based project performed as an inplant training. The program is conducted as a cumulative effort of the Faculty and it is mainly catering to the industrial sector in Sri Lanka. The focus of this program is to produce highly competent, quality, employable graduates who will meet the demands of the industrial sector in the relevant fields with suitable, practical knowledge who could provide immense contribution to the development of the national economy. The intake is limited to maximum number of 120 as specified by the FAS, considering the available resources at the faculty.

Career opportunities

There is growing demand for graduates with professional qualifications to meet the current and future needs of the industrial sector in Sri Lanka. As such, establishing this degree as a four year program with an industrial project component not only uncovers the vast amounts of job opportunities available but also allows our students to pursue higher studies in international universities by fulfilling the requirements of a four year degree. As science graduates are not restricted to a single field, this will open up a multitude of job opportunities. Therefore this degree program will definitely be highly recognized worldwide.

Course overview

B.Sc. (Honours) Degree in Applied Sciences is a

full time four year degree programme conducted in English medium which extends through the general degree program from either Physical, Biological or Polymer Science stream. The programme is assessed at SLQF 6/ NVQL 6 level in the Sri Lankan Qualification Framework (SLQF) of Ministry of Higher Education.

Each student should take course units having a minimum cumulative credit value of 30 in the fourth year having registered for 90 credits from their B.Sc General Degree Programme. There will be two semesters of fifteen weeks and students should register for 17 credits in the first semester including 09 core credits (c) relevant to industrial applications offered by the Faculty of Applied Sciences and must register for 8 optional credits (o) offered by each department based on their discipline or field of study. In the second semester, students should register for a total of 13 credits (a and c), where students will engage in industrial training and do an industrial based project (10 compulsory credits) from the selected discipline or subject area and 2 core credits as assigned by the FAS. During the second semester a student should do the inplant training for 4 days of the core lectures week and last day of the week, Friday he/she must attend to the core lectures at the university. A student must maintain the satisfactory attendance for the core courses offered by FAS and must register for minimum of 46 credits from her/his discipline/focus subject

area for entire four years. Additionally student must perform minimum of five months in-plant training for graduate from this degree program.

The disciplines of B.Sc. Hons Degree in Applied Sciences and respective departments offering the course

1. Mathematics: Department of Mathematics
2. Applied Mathematics: Department of Mathematics
3. Chemistry: Department of Chemistry
4. Polymer Science and Technology: Department of Polymer Science
5. Zoology: Department of Zoology
6. Aquatic Resource Management: Department of Zoology
7. Forestry and Environmental Science: Department of Forestry and Environmental Science
8. Genetics and Molecular Biology: Genetics & Molecular Biology unit
9. Economics: Resource Economics Unit
10. Management Science: Management Science Unit
11. Physics: Department of Physics
12. Electronics and Embedded Systems: Department of Physics
13. Microbiology Department of Botany
14. Plant Biotechnology: Department of Botany
15. Plant Biology: Department of Botany
16. Biology: Department of Botany and Department of Zoology

17. Statistics: Department of Statistics

A student should complete the Industrial training and the assigned industrial based project with relevance to the focus subject area under the external supervisor (industrial) and the internal supervisor (university) from the respective department. A thesis written based on the project, need to be submitted to the respective department to complete the degree program and for the graduation requirement.

Selection criteria

At the end of the third year, students who are interested in the degree program are required to state their preferences with respect to the field of study /discipline in the application form. Additionally, applicants should have passed the compulsory English course unit examinations conducted by the Faculty during the first three semesters and earned 'passing' at for compulsory English. The students will be selected for the relevant field of study /discipline solely by their GPA calculated with course units offered in the five semesters of the general degree (until third year first semester) and the availability of resources in the respective field as decided by the FAS. Students who wish to be selected for the programme are required to maintain satisfactory attendance for courses offered by certain Departments.

Instruction and assessment

Students' performance at each course unit is assessed and graded by one or more theory based examinations, continuous assessments, assignments, reports, case studies, oral examination, etc. as specified by the lecturer-in-charge in the respective course unit. Students will be informed on the method of assessment at the beginning of the semester by the course lecturer. When there are multiple examination for a course unit, marks obtained by the student for each examination is combined in order to obtain a final grade.

For further information please contact:

Prof. Pahan Godakumbura

Program Coordinator

Email - pahanig@sjp.ac.lk

FOURTH YEAR

The relevant course units are listed below.

Course Type

a: Candidates should register and follow these compulsory course units and should obtain a minimum specified grade at the examination to qualify for the degree and/or Class.

c: Candidates should register, and follow these core course units to qualify for the degree or class.

n: These course units are chosen by candidates according to their preference, but based on the selection criteria set by the FAS. To register for this course, candidates should not have been registered for this field of the study at USJ previously.

(eg: Those who have not taken Management in B.Sc general degree program can register for ASP 434 2.0 Industrial Management)

o: These course units are chosen by candidates according to their preference in the relevant fields, but based on the selection criteria set by the FAS. This course unit may or may not have a pre-requisite in the relevant

B. Sc. Degree Courses

B. Sc. Degree Courses

In the first year, all students except those following B.Sc. Honours Degree in Food Science and Technology and B.Sc. Honours Degree in Sports Science and Management should register for the B.Sc. Degree programme selecting a combination of three subjects as given below.

Students who wish to select one of the following subjects offered by the Department of Botany (PBT, PBL or MBL) have to follow the course as a common course until the first semester of the second year. However, a student who wishes to change a course subject offered by the Department of Botany (PBT, PBL or MBL) can do so at the beginning of the second semester of the second year.

Students who have entered through the Biological Science stream of G.C.E. Advanced Level can select one of the combinations given below

Combination No:	Combinations available for Biological Science Students
B01	Chemistry, Zoology, Physics
B02	Chemistry, Zoology, PBT/PBL/MBL
B04	Chemistry, PBT, EMF
B05	Chemistry, Zoology, ARM
B07	Chemistry, Management Science, PBL
B08	Chemistry, Management Science, Zoology,
B09	Chemistry, Food Science, Biology
B12	Chemistry, Management Science, ARM
B14	Chemistry, Biology, GMB
B15	Chemistry, ARM, EMF
B16	Zoology, ARM, Management Science

PBT - Plant Biotechnology; PBL - Plant Biology; MBL - Microbiology; EMF- Environmental Management and Forestry; ARM- Aquatic Resource Management; GMB- Genetics and Molecular Biology

Students who have entered through the Physical Science stream of G.C.E. Advanced Level Examination can select one of the following combinations.

B. Sc. Degree Courses

Combination No:	Combinations available for Physical Science Students
P01	Mathematics, Chemistry, Physics
P02	Mathematics, Chemistry, Statistics
P03	Mathematics, Physics, Statistics
P04	Mathematics, Chemistry, Management Science
P05	Mathematics, Physics, Management Science
P06	Mathematics, Computer Science, Statistics
P07	Mathematics, Computer Science, Physics
P08	Mathematics, Statistics, Economics
P12	Mathematics, Applied Mathematics, Computer Science
P13	Mathematics, Physics, EES
P14	Mathematics, Management Science, Applied Mathematics

EES - Electronics and Embedded Systems

The following subject combinations are available for students entering from either Biological Science stream or Physical Science stream.

Combination No.	Combinations available for Biological Science/Physical Science Students
C01	Chemistry, EMF, Management Science
C02	Chemistry, Physics, PSC

EMF- Environmental Management and Forestry: PSC - Polymer Science and Technology

Students who have entered through the Physical Science stream following Combined Mathematics, Physics and ICT at the G.C.E. Advanced Level Examination must select one of the following combinations.

Combination No.	Combinations available for students who have sat for Combined Mathematics, Physics and ICT
101	Mathematics, Physics, ICT
102	Mathematics, Physics, EES

ICT - Information and Communication Technology; EES- Electronics and Embedded Systems

In addition to the course units offered under the above-mentioned subject combinations, it is mandatory that optional course units for 2 credit value are selected from the course units offered for the development of technical and/or entrepreneurial skills of undergraduates.

Course Units offered for the Development of Technical and Entrepreneurial Skills

These course units are offered with two objectives:

1. to inculcate diverse technical skills other than those associated with their chosen study streams
2. to develop entrepreneurial skills

The course units offered to developing diverse skills in undergraduates are specifically designed with a view of developing diverse skills that will not be acquired through the course units offered by their respective study streams. Students are expected to gain insightful knowledge and hands-on experience as well as socioemotional stability through the outcome-based teaching- learning experience.

The contents of some of the selected course units will enable students to start their businesses through the skills developed through the course units and related activities that will train them to become successful entrepreneurs. The Internship Training course unit will enable students to gain an understanding of the workplace environment thus giving them the experience and the competence to integrate into the world of work successfully and confidently.

It is mandatory for all students to fulfil 02 credits of their credit requirement with these course units.

Courses offered:

Year and Semester	Course code	Title	Department/ Unit/ Programme	Course Type	Remarks
3rd Year Semester I	PBT 330 1.0	Horticulture and Landscaping	Botany	Optional	Students who are following BIO, MBL, PBL or PBT as a subject cannot take this course.
	PBT 333 1.0	Mushroom Cultivation	Botany	Optional	Students who are following BIO, MBL, PBL or PBT as a subject cannot take this course.

	CSC 341 1.0	Scientific Computing for Life Science	Computer Science	Optional	Only for students who entered through the Biological Sciences stream in G.C.E. A/L, who are not following FST, MAN or PHY as a subject
	FST 372 1.0	Training through Food Business Incubator	Food Science and Technology	Optional	Students who are following FSC or FST as a subject cannot take this course.
	EMF 333 1.0	Applications of GIS in Resource Management	Forestry and Env. Science	Optional	Students who are following EMF as a subject cannot take this course.
	MAT 316 2.0	Computer Aided Mathematics	Mathematics	Optional	Only for students who did not take Combined Mathematics as a subject in G.C.E. A/L
	EES 398 1.0	Introduction to Electronics and Embedded systems	Physics	Optional	Only for students who entered through the Biological Sciences stream in G.C.E. A/L, who are not following PHY and/or CSC as a subject
	PHY 398 1.0	Workshop Training	Physics	Optional	Only for students who entered through the Biological Sciences stream in G.C.E. A/L, who are not following Honora in Physics

	STA 349 2.0	Statistics I	Statistics	Core	Students who are following AMT, FST, STA or MAN as a subject cannot take this course.
	ARM 323 1.0	Water Safety and Basic Lifesaving Skills (based on ARM 112 1.0)	Zoology	Optional	Students who are following ARM or ZOO as a subject cannot take this course.
	COP 304 1.0	Field Naturalists Excursions, Innovations and Design thinking, and Laboratory skills for Chemistry	Zoology, Chemistry and Biology	Optional	Students who are following ZOO or BIO as a subject cannot take this course.
	ECN 306 1.0	Applications of Environmental Economics and Policy	Economics	Optional	Students who are following ECN or EMF as a subject cannot take this course.
	MAN 329 1.0	Strategic Management	Management Science	Optional	Students who are following MAN as a subject cannot take this course.
	COP 303 1.0	Basic Analytical Instrumentation	Instrument Centre	Optional	Students who are not taking Chemistry as a subject can take this course.
4th Year Semester I & II	STA 499 2.0	Statistics II	Statistics	Optional	Students who are following AMT, FST, STA or MAN as a subject cannot take this course.

DELT

Department of English Language Teaching

Department of English Language Teaching

English for Scientific Communication Rationale

The English proficiency course offered by the Department of English Language Teaching to the students of the Faculty of Applied Sciences is geared to assist students to deal with any language problem they might encounter when they follow their academic courses in the English medium in the faculty. The lessons planned for them in the first year will cover the four major skills of English language listening, speaking, reading and writing. It is a mandatory requirement to pass the English Proficiency Examination in order to obtain the degree in the university

Course Content

English for Scientific Communication programme is specifically designed to assist students following their respective degree programmes in English medium instruction in the Faculty of Applied Sciences. All the lessons are focused on the scientific context incorporating all the language skills to empower them with necessary language proficiency at both written and oral communication. The module-based teaching materials supported with audio visual teaching aids will give students an innovative learning experience.

Department of English Language Teaching

FIRST YEAR

The Placement Test

A placement test will be conducted at the end of the orientation programme and it assesses the listening, speaking, reading and writing skills of the new entrants of the faculty. The students who score 40 marks or above in the placement test will be exempted from the ongoing English programme.

On-Going English Programme (English for Scientific Communication)

The on-going English programme is offered during the two semesters of the first year for students who score below 40 marks in the placement test. These students should earn at least a C grade at the final examination in order to be qualified for the degree.

Examination and Evaluation

The final examination consists of both a written paper and continuous assessments. Continuous assessments will carry 40 marks and written paper is scaled for 60 marks.

Semester I

ENG 101 2.0	Compulsory English (Scientific Communication)	a
-------------	---	---

Semester II

Postgraduate Courses Degree Programmes

M.Sc. Degree/Postgraduate diploma in Polymer Science and Technology

**Offered by the Department
of Polymer Science**

M.Sc. Degree Programme in Polymer Science and Technology

Offered by the Department of Polymer Science

Why Study Polymer Science?

Today polymers have become indispensable to mankind. Rubber and plastic have become integral parts of our daily lives. There applications are everywhere, from a simple bouncing ball to rocket science, beautiful jewelries to artificial hearts. We use polymers from morning till night, e.g.: bed, slippers, toothbrush, cups, plates, mobile phones, cloths, car, tyres, computer to television. In general, 80% materials used daily by a regular human being is made out of polymers. Simply we are living in a world of polymers, so why not study them!

History of the M.Sc. program in Polymer Science and Technology at USJ

Polymer industry has become a major contributor towards our national economy since the early 1930's. By recognizing the national need of quality education in this field of science, a master's degree program in Polymer Science and Technology (PST) was introduced in 1974 by the Department of Chemistry with the aid of University of Aston, United Kingdom.

Course description

Our endeavor is to develop enlightened members of the polymer society. We pursue excellence in graduate education. Therefore, the program is designed to embrace topics from introductory level to high end applications of polymer science and technology. This 24-month M.Sc. program has been aimed for training much needed

polymer scientists, polymer technologists, quality control officers, and plant managers for booming Sri Lankan rubber and plastics industry. Thus, the course is suitable for the professional community who are engaged in PST and for graduates seeking entry to such organizations.

Careers

The program encompasses a broad spectrum of both theoretical and practical aspects in PST. By gaining good theoretical and practical insight students find it easy to establish themselves in the Sri Lankan polymer-based industries and academia. In addition, the course curriculum contains sufficient academic depth such that it will create a golden platform for students to proceed for higher degrees at national as well as international level.

M. Sc. Degree in Science and Technology of Herbal Products

Offered by the Department of Chemistry

M.Sc. Degree in Science and Technology of Herbal Products

Offered by the Department of Chemistry

Introduction

Sri Lanka has a large number of medicinal and aromatic plant species and has many industries that utilize such plant materials. Sri Lanka also has its own traditional system of medicine based on the ancient system of Ayurveda. Today, there is an increased demand for herbal products such as cosmeceuticals, nutraceuticals, and herbal health care products, not only in Sri Lanka but also globally. Therefore, there is a need to provide the necessary scientific knowledge and develop human resources for the industrial utilization of medicinal and aromatic plants. This will open up a wide range of opportunities in industry, research and business development. Keeping this in mind the Department of Chemistry of the University of Sri Jayewardenepura has introduced for the first time in Sri Lanka, a full time two-year postgraduate course leading to a master's degree in science and Technology of Herbal Products.

Course description

The M.Sc. program has been designed to encompass a broad spectrum of topics to provide necessary scientific knowledge and practical skills in the field of Science and Technology of Herbal Products. It is a full time, two-year program. The first academic year will comprise of lectures, laboratory work, field visits, assignments and a seminar and the second academic year will comprise of the research component and a seminar.

Careers

The M.Sc. program will help graduates seek employment in government and private sector institutions that produce herbal products utilizing medicinal and aromatic plants. This program will also open up opportunities in research at national as well as international level in areas related to Science and Technology of Herbal Products. In addition, this will provide background information for those interested in starting up their own enterprises.

M.Sc. Degree/ Postgraduate Diploma in Industrial Analytical Chemistry

**Offered by the Department
of Chemistry**

M.Sc. Degree/Postgraduate Diploma in Industrial Analytical Chemistry

Offered by the Department of Chemistry

Introduction

Chemical analysis plays a vital role in all aspects of life. There is an increasing demand for qualified analytical chemists throughout the world. By recognizing the need of qualified personnel in this field of science, a Master's Degree program as well as a Post Graduate Diploma in Industrial Analytical Chemistry has been initiated by the Department of Chemistry in 2013.

Course description

The Department of Chemistry at University of Sri Jayewardenepura is equipped with high-end analytical tools where students will get hands on experience in achieving the correct level of accuracy in each measurement, which is the key for developing a qualified analytical chemist. The second-year research component and the case studies are specifically designed to solve analytical chemistry problems in the industrial setup. The duration for the M.Sc. Degree is two years whereas the duration for the Post Graduate Diploma is one year.

Entry requirements

Applicants should possess any of the following:

A B.Sc. degree from any recognized university having a minimum 30 credit units in Chemistry. Any other special qualification equivalent to a degree recognized by the UGC or considered appropriate by the University Senate.

Students who are awaiting results are also eligible to apply

Careers

This course is designed to improve the analytical chemistry skills of government and industrial employees who are engaged in chemical, pharmaceutical, bio-analytical, forensic, food and environmental fields. This also gives an opportunity for university graduates to improve their entrance potential for industrial positions as well as for further higher studies.

M.Sc. Degree/ Postgraduate Diploma in Industrial Mathematics

Offered by the Department
of Mathematics

M.Sc. Degree/Postgraduate Diploma in Industrial Mathematics

Offered by the Department of Mathematics

Introduction

Being the first Faculty of Applied Sciences of the country and realizing the potential of graduates with a strong mathematical background, we launched the first Postgraduate Diploma/M. Sc. Program in Industrial Mathematics in Sri Lanka, in 1996. By this program it is hoped, to bring together the mathematically oriented personnel employed in various industries and the application orientated researchers within the university community, to provide means of further improving their effectiveness. It is a well- accepted fact that science and technology play a vital role in the process of development. We will concentrate on utilization of the resources of this country for the benefit of its own people.

The Growing Importance of Industrial Mathematics

Success in Industrial Mathematics is based on applying existing tools and computational techniques in addition to discovering new tools and techniques. The mathematical scientist in industry must have a broad background to be able to recognize when the model or solution procedure has already been investigated. Skills in formulation, modeling and implementation are critical in industry. Teamwork, communication skills and breadth of knowledge are also valued in industry.

Course Description

Total number of contact hours (lectures and practicals)

of the M.Sc. program exceeds 400 hours. Therefore, the M.Sc. program is categorized as a full-time program. Naturally, Industrial Mathematics may borrow from a variety of mathematical disciplines, such as Numerical Analysis, Computational Mathematics, Partial Differential Equations, Dynamical Systems, Control and Optimization theory, Probability and Statistics and Discrete Mathematics. The common feature running through this program is the goal of getting better understanding of industrial models and processes through mathematical ideas and computations.

Programme Eligibility

Candidates applying for the PG Diploma/ M.Sc. program in Industrial Mathematics should have a bachelor's degree with Mathematics as a component preferably B.Sc. (Special) Mathematics, Statistics, Computer Science, B.Sc. (Physical Science) or B.Sc. (Engineering) graduates.

M.Sc. Degree/ Postgraduate Diploma in Fisheries and Aquatic Resource Management

**Offered by the Department
of Zoology**

M.Sc. Degree/ Postgraduate Diploma in Fisheries and Aquatic Resource Management

Offered by the Department of Zoology

Introduction

The postgraduate degree program is designed to meet the increasing need for highly skilled multidisciplinary decision makers, entrepreneurs, biologists or biologically literate mathematicians and statisticians in order to address the management challenges of the present day aquatic resources facing. It is of equal interest to recent graduates seeking employment prospects in aquatic resources management. This is the pioneer M.Sc. degree in the discipline in Sri Lanka which has produced hundreds of qualified resource managers working in key local and foreign institutes.

Course description

The duration for the M.Sc. Degree is two years whereas the duration for the Post Graduate Diploma is one year.

Entry qualifications

First degree in Biology, Veterinary Science, Chemistry, Physical Sciences, Geology, Oceanography, Environment Science, Natural Resources, Agriculture Any other degree with 3 years of experience in fisheries or aquatic resources sector. Any other qualifications equivalent to a degree recognized by the University Grant Commission with at least 5 years of experience in the field of fisheries and aquatic resources.

M. Sc. Degree/ Postgraduate Diploma in Computer Science

**Offered by the Department
of Computer Science**

M.Sc. Degree / Postgraduate Diploma in Computer Science

Offered by the Department of Computer Science

Introduction

This program has been designed for those who are interested in pursuing higher studies in the field of Computer Science. The curriculum of this program is designed to provide students with a good grasp of core contents of Computer Science which any professional in the subject is expected to know, to foster logical and analytical thought, independent study, self-motivation and communication skills, to make aware of research results and latest trends in the key areas of the subject, to provide opportunities to gain practical experience of computing, using modern hardware and software, in order to provide motivation for and deeper understanding of material taught in formal lectures, to produce graduates with sound knowledge in both theory and practice in Computer Science, including current emerging technologies and experimental learning, to prepare students to contribute to the computing profession upon graduation and to provide the necessary background required to read for a Ph.D. in Computer Science.

Eligibility

1. Bachelor's degree from a recognized university or any other equivalent qualification in the field of Computer Science or ICT that would be acceptable to the Faculty of Applied Sciences and the senate of the university.
2. All lectures, practical classes and examinations are conducted in English. Therefore, the candidates must be fluent in English.

Target group

- Those who need academic qualifications in Computer Science.
- Those who are planning to start a career or already employed in a computing environment.
- Those who teach Computer Science or ICT in schools or universities or other educational institutes.

Offered by the Department of Forestry and Environmental Science

Introduction

With the concept of “sustainability” percolating into virtually all key sectors of the economy, applied knowledge in environment, natural resources and their management has become a skill of demanded in the modern competitive career market. The MSc./Post Graduate Diploma in Forestry and Environmental Management offered through the Department of Forestry and Environmental Science is designed to equip you with the necessary knowledge and skills to take up diverse challenges in nature resource management.

Be a part of the tradition...

Postgraduate education in Forestry and Environmental Sciences at the Department of Forestry and Environmental Science University of Sri Jayewardenepura has a history of more than 30 years. Since 1983, we have produced over 500 professionals with master's qualifications, who are currently holding top managerial and executive positions in various forestry and environment related institutions, and ably contributing to the management of country's natural resources.

Course description

M.Sc. in Forestry and Environmental Management is a full-time two-year course whereas Post Graduate Diploma is a one-year course. The course consists of core courses, assignments, and a research project. The coursework component of both M.Sc. and Post Graduate Diploma programs consists of an integrated series of lectures selected from 4 taught modules.

During the first year, both M.Sc. and Post Graduate Diploma students follow a common program that provides a comprehensive background. During the second year, M.Sc. candidates concentrate more on applied aspects as well as on the research project.

Entry requirements

B.Sc. Degree in Biological or Physical Science, Forestry and Environmental Science, Geography, Geology, Agriculture, Civil or Chemical Engineering or Four-year Degree in Management, Social Science, Economics, with at least 5 years of experience in a relevant field or Any other special qualification equivalent to a degree recognized by the University Grant Commission and considered appropriate by the University Senate, with at least 7 years of experience in the field.

Careers

The course is designed to train professionals to undertake tasks in forest and wildlife management, water and other natural resource management, environmental pollution control and use of special tools such as environmental impact assessment, cost benefit analysis, GIS and remote sensing applications in environmental management. As such, this program will open up the pathway to diverse and rewarding careers in government ministries, non-governmental organizations, environmental and business consultancies, public sector organizations, and manufacturing and service industries in the private sector.

Postgraduate Programmes in Applied Statistics

**Offered by the Department
of Statistics**

Postgraduate certificate/M.Sc. Degree in Applied Statistics

Offered by the Department of Statistics

Why Study Statistics?

Statistical thinking and methods are becoming more and more prevalent in an exceptionally wide range of areas. With this postgraduate qualification in Applied Statistics, students can advance their career in almost any field, including education, science, technology, health care, government, or business. In Sri Lanka, qualified statisticians are Central Bank of Sri Lanka, Department of Census and Statistics and Coconut/ Tea/Rubber research institutes to name but a few. The demand for trained statisticians continues to increase in the industry as well as it is becoming more dependent on predictive data and numerical reasoning.

History of the postgraduate programmes in Applied Statistics at USJ

The first ever self-financed postgraduate programme in Sri Lanka, namely the postgraduate Diploma in Statistics, was started in 1968 by the Department of Mathematics of the University of Sri Jayewardenepura. The Department of Statistics and Computer Science restructured and renamed that programme as the M.Sc. Degree/Postgraduate Diploma programme in Applied Statistics in 1997. In year 2016, the department restructured the postgraduate programme in Applied Statistics to cater for those who wish to obtain one of the following qualifications: Postgraduate Certificate (SLQF 7), Postgraduate Diploma (SLQF 8), Masters Degree (SLQF 9), M.Sc. Degree (SLQF 10).

Course Description

Postgraduate Certificate programme in Applied Statistics has been specially designed to provide professionals from various fields with a basic knowledge in Applied Statistics. The duration of the Postgraduate Certificate programme is one year.

The M.Sc. Degree programme in Applied Statistics has been designed to provide graduates from a related field with an opportunity to further develop their knowledge in Applied Statistics. The duration of the M.Sc. Degree Programme is two years.

The M.Sc. programme also consists of two exit points at Postgraduate Diploma and master's degree levels.

Entry qualifications

The Postgraduate Certificate programme in Applied Statistics requires a bachelor's degree from any field of study from a university or an equivalent institution which is recognized by university Grants Commission/University of Sri Jayewardenepura. An adequate mathematical knowledge is recommended. The M.Sc. programme in Applied Statistics requires a bachelor's degree with 30 credits in statistics and/ or a related discipline from a university or an equivalent institution which is recognized by University Grants Commission/University of Sri Jayewardenepura.

M.Sc. Degree in Physics Education

**Offered by the Department
of Physics**

M.Sc. Degree in Physics Education

Offered by the Department of Physics

Introduction

Physics plays an important role in all aspects of life and is undoubtedly the route to intellectual enlightenment in relation to the physical world. In addition to its well-known applications in numerous fields, physics provides a logical and conceptual framework useful in understanding natural phenomena and processes. Exposing students to physics at early stages therefore will help them to have a proper insight into the physical world. This however cannot be achieved without the active involvement of properly trained teachers who are well versed in principles of Physics as well as those of Education. Academic discipline that covers both these aspects is referred to as Physics education. The Department of Physics wishes to address this problem and proposes to commence a Postgraduate Diploma / M.Sc. programme in Physics Education under the Board of Study of Physical Science of the Faculty of Graduate Studies to fill this lacuna.

Objectives

Objectives of the proposed postgraduate programme are to produce secondary school Physics teachers and other educators in Physics who will be

1. Having a sound knowledge of physics based on concept as well relevant aspects of Education.
2. Competent enough to upgrade their knowledge in new areas that will be added to the Physics curriculum from time to time.
3. Having general idea of philosophical aspects of Physics and recent developments and trends in Physics.

4. Competent in using mathematics, computers and microprocessors etc. as tools of teaching of Physics.
5. Sufficiently motivated to use the knowledge of Physics in design low-cost equipment for Physics laboratory studies.
6. Sufficiently matured to identify and design projects that would develop skills and competencies in the student and supervise them.
7. Knowledgeable in modern evolution methods.
8. Capable of recognizing the usefulness and limitations of Physics and appreciate its applicability in other disciplines and everyday life.
9. Capable of developing skills and attitudes in students that will be of long term value in increasingly technological world rather than focusing on large quantities of factual material which will have only short-term relevance.
10. Capable of motivating students to use the logical thinking process acquired by studying Physics in addressing other issues.

Entry Qualification

Graduates of recognized universities who have offered Physics as a subject are eligible to apply. Preference will be given to those who are in the teaching profession or allied professions.

M. Sc. Degree in Food Science and Technology

Offered by the Department of
Food Science and Technology

M. Sc. Degree in Food Science and Technology

Offered by the Department of Food Science and Technology

Why Study Food Science?

Food Science and Technology draws on the spectrum of biological and physical sciences, applies them to one of the essentials of life which is none other than food. Food science, not only in the academic, but in the real-world sense, relies on mathematics, physics, biology, chemistry, biochemistry, microbiology, engineering, processing, nutrition, biotechnology, marketing and management. The purpose of the M.Sc. degree in Food Science and Technology is to provide the student with an advanced training in a specialization, with a particular emphasis on the acquisition of experience in the strategies and experimental methods of modern, original scientific research.

History of the M.Sc. program in Food Science and Technology at USJP

The national need for human resource development in the field of Food Science and Technology was recognized by USJP as far back as 1969 based on this realization the first ever Post Graduate Diploma in Food Science and Technology in the country was introduced through the Department of Biological Sciences in 1968 due to the efforts of late professor A.C.J. Weerakoon, then professor of Biological Sciences. Subsequently in 1979 this programme was transferred to be managed by the Department of Chemistry. Later in the year 1992, the Postgraduate Diploma was upgraded to a Master Degree in Food Science and Technology to be executed through the Department of Chemistry. On establishing the Department of Food

Science and Technology in the year 2005 this master degree programme became to be managed by the Department of Food Science and Technology under the responsibility of the Faculty of Graduate Studies.

Course description

The course consists of course work, practical classes and a research component geared towards those already employed in the food sector as food technologists, research scientists, academics, trainers, food analysts, QC personnel, factory managers, medical/scientific persons in Nutrition, Food Policy and Food Security or for those wishing to enter a career in the food related sectors as above or enhance knowledge on scientific aspects of food resources and their management for better utilization in business opportunities. Hence the curriculum has been designed to cater to the needs different personnel involved in the food industry.

Entry qualification

Applicants should possess one of the following degrees from any recognized university:

B.Sc. degree with Chemistry as a subject

Degree in Agriculture, Medicine, B.V.Sc., B.A.M.S., M.B.B.S., Chem..Eng.,

An equivalent qualification from a recognized higher education institution

Recruitment procedure

Applicants are invited from the candidates who have satisfied the entry requirements. Due to large numbers of candidates applying for this course, suitable candidates are selected by an aptitude test and subsequently with

an interview where mostly authenticity of certificates is examined. However, applications sponsored by state and private sector other organizations working in the target food-related areas would be given preference.

Careers

The program prepares those already employed in the food sector as food technologists, research scientists, academics, trainers, food analysts, QC personnel, factory managers, medical/scientific persons in nutrition, food policy and food security or for those wishing to enter a career in the food related sectors. The programme incorporates many different disciplines and through those, it prepares you for a career not only in the food industry, but in many areas that you probably wouldn't even think of.

Department of Botany

The mission of the department is to foster, promote and excel in teaching, learning and research in Plant Biology, Microbiology and Plant Biotechnology. Apart from imparting knowledge and developing skills of students on fundamentals of these areas, enhancement of the quality of graduated, quality of teaching and research, and expansion of services offered to industry and society at large are other objectives of the department.

Introduction:

Plants are the life-givers on earth. As primary producers, they are the first link of all food chains; produce oxygen that we breathe in; they give mankind everything from food, timber, medicine, spices, perfumes and oils to flowers. Can we ever think of an ecosystem without plants?

These are just some reasons why Botany holds a unique position among all sciences. The knowledge of a man will not be complete without the knowledge about trees. Botany enables one to learn about phenomena like the greenhouse effect, environmental pollution, and how to create an entire plant from a cell that is not even visible to the human eye.

Apart from all these, we, Sri Lankans are lucky enough not only to possess a rich biodiversity, but also to inherit an enchanting virgin rain Forest; the Sinharaja, which makes Botany a truly special field.

Degree programmes offered by the department:

The Department of Botany offers three different courses (Plant Biology, Plant Biotechnology and Microbiology), which are designed to provide students with solid preparation to develop a range of skills in above areas of plant sciences together with employability skills such as communication, critical and creative thinking, teamwork and decision making. The Department offers two postgraduate research degrees: M.Phil. and Ph.D. in a range of disciplines

including Biotechnology, Tissue culture, Microbiology, Molecular Biology, Genetics and Plant Anatomy. It has built up an excellent research culture by having many staff members who have received awards for their innovations.

Facilities in the Department

- **Molecular Biology Laboratory:**

A well-equipped Biotechnology Laboratory is available for teaching several course units in Plant Biotechnology and also for the use of research students.

- **Computer Laboratory:**

A computer laboratory with networking is available for teaching Biometrics, Bioinformatics, Molecular Modelling and Numerical Taxonomy.

- **Plant House:**

Three plant houses are available for maintaining live specimens needed for teaching Plant Diversity, Plant Taxonomy, Plant Virology, Plant Tissue Culture etc.

- **Tissue Culture Laboratory:**

A fully equipped Tissue Culture laboratory is available for teaching and research purposes.

- **Botanical Garden:**

In addition to Greenhouses a botanical garden is available (with a pond) for teaching and research (field experiments/field trials) purposes.

- **Herbarium:**

An herbarium comprising wet and dry specimens gives you an opportunity to study the plant diversity of the country.

- **Research Laboratories:**

Research laboratories for Plant Tissue Culture, Molecular and Microbiology, Virology and Pathology are available with 24-hour access to research students under the supervision of senior academic member of the department.

Botany and Plant Biotechnology Society

Botany and Plant Biotechnology Society, which was formed in 2006, conducts various activities such as workshops, seminars, public lectures related to current topics in popular science.

Department of Chemistry

Chemistry, which is the study of atoms and molecules from nano to macro levels, is often referred to as the central science, and is critical to a fundamental understanding of the world around us. Chemical concepts have traditionally been central to the canonical sciences such as biology, physics, and geology and continues its role in newer disciplines (i.e: materials science, forensics, astrobiology, biotechnology, bioinformatics, pharmacology, and atmospheric science).

Introduction

Chemistry is a rapidly growing discipline bringing new discoveries theories, and scientific applications that ultimately benefit society. It is necessary for practicing chemists to be proficient in a wide range of chemical disciplines in order to address the important problems that lie at the interface of chemistry and closely related disciplines.

The Department of Chemistry at the University of Sri Jayewardenepura offers courses that incorporate the most recent advances in the discipline and provide our students with a strong foundation in the fundamentals of Chemistry and a choice of more specialized optional courses that cover a wide range of topics to suit their future goals. Academic programs in Chemistry are designed to meet the needs of the country and prepare students to seek employment with confidence. The B.Sc. Honours in Chemistry degree program offered by the Department of Chemistry provides students an in-depth knowledge in the sub-disciplines of Chemistry with a strong emphasis on fundamentals of Chemistry. The high level of standards in the Honours degree programme has resulted in postgraduate opportunities for the graduates to study in leading universities around the world.

The Honours degree in Industrial Chemistry is another program offered by the Department of Chemistry. This program aims to strengthen the knowledge and skills of students who wish to become industrial

chemists by offering the fundamentals of Chemistry required for industrial research and development. Industrial Chemistry is the branch of Chemistry that deals with the development, optimization and monitoring of various chemical processes towards the transformation of raw materials into useful commercial products that are of beneficial to society.

The department of Chemistry has a highly skilled academic staff, 20 PhDs and offers an excellent research environment that includes research laboratories and a fully staffed instrumentation facility with state-of-the-art equipment including Atomic Absorption Spectrophotometer, spectrophotometer, Fluorescence Spectrophotometer, Gas Chromatography Mass Spectrometry, Luminescence Spectrometer, Near IR Analysis.

The vision of the department is to contribute to national development, scientific advancement and professional development by providing up to date training and opportunities to students to become efficient and successful professionals.

Degree programmes offered by the department

B.Sc. Honors degree with chemistry as a subject
B.Sc. Honors degree in chemistry
B.Sc. Honors degree in Industrial Chemistry

Postgraduate Courses

The department has built a long tradition of excellence in research and postgraduate training. It offers

research degrees (Ph.D., M.Phil.) and the following MSc. Programmes by coursework.

M.Sc. in Industrial Utilization of Medicinal & Aromatic Plants.

M.Sc. /Postgraduate diploma in Industrial Chemistry

The Chemical Society

The Chemical society of University of Sri Jayewardenepura is one of the most active student societies in the university. Some of the activities are publication of a magazine (CRUCIBLE), organizing guest lectures, Annual Award of the GCN Jayasuriya Gold Medal at the convocation, Annual Chemistry staff vs students cricket match, annual outing, raising money for book/scholarship funds.

Department of Computer Science

The mission of the department of Computer Science (DSC) is to produce high quality graduates and postgraduates in Computer Science and ICT who can contribute to the national development and to the development of the two disciplines.

Introduction

Computing is an essential part of 21st-century life and is an exceptionally fast-moving subject that gives rise to a range of interesting and challenging problems. To solve these problems skill knowledgeable and versatile scientists who have a firm grasp of the fundamental concepts as well as in-depth knowledge of specific areas such as software engineering, visual computing, intelligent computing, distributed computing, mobile computing, networks, web services and the Internet are needed.

Computer Science and ICT at the University of Sri Jayewardenepura

The Department of Computer Science at the University of Sri Jayewardenepura is a large and growing department with exciting undergraduate teaching programs. A degree from us can prepare you for some of the newest, most dynamic and exciting careers around today and the careers of tomorrow. The department offers Computer Science and ICT as a subject for physical science undergraduates. By choosing to study Computer Science/ ICT with us, you will be well on your way to becoming a leader in the field of computing.

Currently there are about 520 undergraduates in four batches following general degree with Computer Science, general degree with ICT and special degree in Computer Science.

Teaching methods involve a combination of lectures, tutorials, group work and practical work. The tutorials are provided in all years of the study programs. At the first year, most practical work is carried out in supervised laboratories with academic staff on hand to offer assistance. In the more senior years, most of the practical work is carried out independently with consulting assistance available at specified times. At the University of Sri Jayewardenepura, we are dedicated to the education and development of leaders in the computing industry.

Degree programs offered by the department

B.Sc. General Degree with Computer Science as a subject

B.Sc. Honours Degree in Computer Science B.Sc. General Degree with ICT as a subject

Goals and learning outcomes of course units, course contents, methods of assessments, handouts, past question papers, details on recent research activities, postgraduate programs etc. are available at our website www.cs.sjp.ac.lk.

Postgraduate Studies

Computer Science is a dynamic and continually expanding subject, and DCS at SJP is committed to excellence in its teaching and research. Our postgraduate studies will enable you to explore the full breadth and depth of this dynamic discipline.

The Department of Computer Science offers postgraduate programs of study in Computer Science leading to the:

- Postgraduate diploma/certificate
- Master of Science (M.Sc.)
- Master of Philosophy (M.Phil.)
- Doctor of Philosophy (Ph.D.)

Post graduate diploma / Certificate

The Postgraduate Diploma/Certificate in Computer Science is a professional qualification for graduates with a background in computing. It is particularly suitable if you are working in areas related to computing and wish to bring your expertise up to date with developments in this fast-changing field. As research project is not compulsory, the postgraduate program will appeal to students wanting for postgraduate course-work qualification.

Master of Science (M.Sc.)

The Master of Science in Computer Science is a master's degree centered on course work completed over two years with or without research work. This is designed to broaden understanding and knowledge of computer science and enhance the ability to apply this within industry or commerce. Also, in addition to gaining an in-depth knowledge of state-of-the-art technologies, it also develops further the competence and ability to apply them in your own working environment.

Master of Philosophy (M.Phil.) The Master of Philosophy in Computer Science is a research-based degree, in which students develop research skills that will be invaluable for further work in a research environment, and it aims to provide preparation appropriate for undertaking a Ph.D. program in computer science. Students are expected to make a significant contribution to knowledge in the field of study.

Doctor of Philosophy (Ph.D.)

The Ph.D. program in Computer Science is a research degree granted primarily on the presentation of a substantial research achievement which involves three to four years of original research work. A Ph.D. is generally required by those people seeking careers in a university or research laboratory.

Memberships

Currently the department has the membership for Advance Computer Science program in Oracle Academy Sri Lanka.

The Society of Computer Science

The Society of Computer Science, which was formed in 2000, is one of the leading and most active student societies in the university. It is the only society in the university that is dedicated to Computer Science.

Goals of the Society are to promote Computer Science and ICT as a subject, conduct Workshops, Seminars, Lectures and Field tours related to Computer Science and ICT and improve the level of knowledge on cyber technology among student and prepare them for the future challenges.

The activities conducted in 2018 include Aurora the Annual conference on Computer Science: a conference for undergraduates and school students, back to school session: The SCS goes back to school and help students to uplift their knowledge in areas of computer science and ICT, Guest lectures and workshops for undergraduates to improve their knowledge in trending topics in computer science and ICT, and Annual Inter-faculty Gaming Competition. **Our achievement:** Gold medal at Asia Pacific ICT Awards (APICTA) 2019 and 2018, Silver and Bronze Medals at NBQSA 2019 and 2018, First Place Global Award at Robotic Design Competition, Spain, 2019, National Champion at Global Student Entrepreneur Awards (GSEA) 2017, 2nd Runner Up at Hackx

2016 (Inter - University Hackathon), Google Student Ambassador for year 2014, Google Anita Borg Memorial Scholarship for the year 2014

Department of Food Science and Technology

The Department of Food Science and Technology offers B.Sc Honours degree programme in Food Science and Technology. The B.Sc. (FST) degree programme has a strong origin and background as the university started Food Science and Technology teaching through a Postgraduate Diploma programme in Food Science and Technology as early as 1969.

Strategic Intent of the Department of Food Science and Technology

To become a centre of excellence in higher learning in Food Science and Technology and Nutrition which disseminates knowledge in keeping with the development needs of the country and requirement of the region for related professionals.

Being closer to Colombo, the department has comfortably established collaborative links with major and small scale institutions of the food sector. Therefore, undergraduates have great opportunities to get themselves exposed to many food related industries for field trips, Industrial/Research/Field placement etc. In addition, the department is in position to invite experts working for the relevant private sector institutions in conducting lectures, seminars, workshops and practicals.

Program outcomes; B.Sc. Honours in Food Science and Technology:

1. Demonstrate competency in appropriate knowledge in the field of food[#].
2. Communicate efficiently and effectively in respective field of specialization using written, oral, visual and electronic forms.
3. Demonstrate as an empathetic and emotionally intelligent team player with leadership qualities.

4. Apply the skill-set* related to food[#] creatively to solve real-world problems by making context specific operational decisions while adapting to changing environments.
5. Create value through integration of innovation, and entrepreneurial & managerial proficiencies.
6. Implement subject-based solutions in keeping with ethical, societal, and environmental norms and need for sustainable development in the sphere of food[#].
7. Depict lifelong learning through scholarly advancement and/or strengthening professional skills and ensuring the betterment of the community.

* The term food means basic, advanced and applied subjects related to Food Science, Food Technology and Nutrition.

* A skill set is the combination of knowledge, experience, and abilities that the student develops through his studies and beyond

The B.Sc. degree in Food Science and Technology has been designed to enable the prospective FST graduates to be able to demonstrate excellence in all subject related practical skills and apply both theoretical knowledge and related practical skills acquired appropriately in different situations. It is

also expected that they will develop their technical competencies in order to be fitting to any challenging situation in the Food Industry. The abilities and skills expected to transfer to the prospective FST graduates through the degree programme include Generic Skills, Numeracy skills, Communication skills (with special emphasis on scientific communication), Information and communication technology (ICT) skills, Interpersonal/teamwork skills, Self management and professional development skills.

The FST degree programme offered by the Department of Food Science and Technology has been designed to help the student in achieving the following,

1. Develop the knowledge, skills and attitudes based on a broad and multi-disciplinary approach in order to fulfill the current and emerging needs in local, regional and international food sector.
2. Develop the knowledge, skills and attitudes through theoretical, laboratory and out-door/field practical components in experiencing the real world practices in the field to establish and manage socially acceptable, economically viable and environmentally friendly food industries.
3. Identify problems and issues related to the food industry and conduct independent research in order to find the most appropriate solutions.
4. Develop ICT skills

5. Develop interpersonal, teamwork and leadership skills.
6. Develop self management and professional development skills
7. Maintain an acceptable moral conduct

Association of Food Science and Technology (AFST)

The Association of Food Science and Technology (AFST) is made of a collection of enthusiastic, skilled and dynamic undergraduates who work hard every day for the progress of the field of Food Science and Technology with a high degree of professionalism and develop and fine tune their skills through their hard work. The AFST was established on the 11th of January 2007 and the membership of the association is available for any undergraduate who follows the degree of Food Science and Technology at University of Sri Jayewardenepura.

Members of AFST come across many opportunities every year to increase their subject knowledge, develop contacts and gather more information about the vastly expanding and improving industry. One such event is Pro Food Pro Pack Exhibition which is the largest International Food Exhibition in Sri Lanka where our university has been able to win more than 8 awards through these years competing with other Universities and Industries. In addition, there are many events organized by the AFST, such as fun match and annual trip, awareness programmes

on World Food Day, Vidujaya Exhibition in 2009, Food Nights, Sankalpana in 2011, Arunella in 2012 and have also taken part in massive events like Dayata Kirula 2014.

Department of Forestry and Environmental Science

The Department offers multidisciplinary programs in Conservation, Management and Utilization of Forest and Other Natural Resources and Environmental Protection (Pollution Prevention and Waste Management).

Department of Forestry and Environmental Science

The Forestry education in the University of Sri Jayawardenapura has a history of more than 30 years. Department of Forestry and Environmental Science is the only one of its kind in Sri Lanka which offers both undergraduate and postgraduate courses in Environmental Management and Forestry. Especially through its postgraduate program, the department has been able to reach wide horizons in training professional in both government and non-government sectors who are capable of contributing effectively to the country's development process. About 950 professionals have been trained up to 2020, many of whom are employed in forestry and environmental sectors.

Mission of the department

To assist in sustainable management of natural resources and environment through manpower and knowledge development.

Resources

Among the many facilities of the department, a fully equipped auditorium and lecture rooms with audio-visual facilities and a computer center can be highlighted. There are greenhouses for practical work. The department manages 100 acres of Forest Reserve and Field Research Center at Yagirala, which offers opportunities to study and practice Forest Management, Biodiversity and Ecotourism.

Objective of the Course

To develop decision making knowledge and skills required to manage forest resources and the natural and man-made environment.

Field/ Factory Assignment (Internship)

In the third year, students are placed in leading public and private sector institutes in the fields of forestry, agriculture, environmental, sustainability, wildlife, rural development and policy formulation for field/ factory assignment (internship). This is intended to provide students with an opportunity to acquire knowledge of a “real work” environment. This program has made our graduates more employable in the previous years.

Postgraduate Degrees

The Department offers the following programs at postgraduate level.

- M.Sc./Postgraduate Diploma in Forestry and Environmental Management
- M.Phil. and Ph.D. Degrees by research

M.Sc./Postgraduate Diploma in Forestry and Environmental Management

The overall objective of this course, which has been offered since 1983, is to develop decision making knowledge and skills required to manage forests and other natural environmental resources and to prevent and control environmental pollution. The target groups for this programme are those who are already employed in forestry, environment and natural

resource management sectors and others who wish to pursue careers in the above sectors

M.Phil and Ph.D. Degrees by Research

The department enrolls students for M.Phil and Ph.D degrees by research in areas within the specialization and research interests of the staff

Departmental Research

Research in the Department carried out by staff, special degree students and postgraduate students cover a wide range of topics relevant to Forestry and Environment Science and management. This includes research in forest management, silviculture, forest ecology, wood science and timber technology, agroforestry and social forestry, tree improvement and propagation, forest management, wildlife management, forest economics, pollution control, waste management etc.

Several collaborative research projects have been conducted with foreign universities such as University of Bangor, UK; Yale University, USA; Edith Cowan University, Australia, University of Calgary, Canada, other governmental agencies, industry, national and international NGOs with a view to provide a more pragmatic and realistic approach in solving problems.

Centre for Forestry and Environment

The Centre for Forestry and Environment (CFE) was established in 2016 with the objective of supporting pioneering research in forestry and environment by

the academic staff of the Department of Forestry and Environmental Science, in collaboration with researchers from other departments of the University of Sri Jayewardenepura and leading Research institutes in Sri Lanka and other countries. The facilities available at the Centre are also used to further train the students of the Department of Forestry and Environmental Science at B.Sc., M.Sc., M.Phil. and Ph.D. levels in conducting cutting-edge research.

The main objectives of the CFE are to conduct high quality research projects aimed at solving pressing issues in forestry and environment sectors in Sri Lanka and to contribute to the national development by finding appropriate solutions through applied research. While serving the needs of the nation, these research is expected to reach global audience by having them published in premier scientific journals. The uniqueness of this centre is its ability to bring together many researchers to form multi- disciplinary teams that can undertake tasks which may not be completed by one or two individuals. Given the wide coverage of the forestry and environment sectors, such collaborations are essential to achieve innovative results useful for the progress of the country.

Other Collaborations

The department maintains close collaborations with other institutions in forestry and environment. Every year opportunities have been provided for two Range Forest Officers of the department to follow the B.Sc.

Degree programme with Environmental Management & Forestry as a subject.

Further Training/Workshops

Apart from the regular training programs conducted by the department, short-term training workshops are also being conducted targeting relevant government and non-government officials, personnel from the industry and others on a variety of subject areas of mutual interest to both parties.

Role of the Department in Natural Resource Management

The department also plays an important role in national development by its contribution to national and international activities. One such activity which has gained international recognition is the Annual Forestry and Environment Symposium which is being held for the 27th consecutive time this year. The academic staff of the Department serves in national committees, conducts environmental assessments for national and international projects and provides advice to the government as well as private sector in the fields of forestry and environment. The staff also liaise closely with the forestry and environment related institutions and carries out research solely and in collaboration with other institutions in fields of great importance. The department is also heavily engaged in dissemination of knowledge among the general public and personnel in other sectors.

Center for Sustainability

The Center for Sustainability (CFS) is a body for professional environmental services, research and extension attached to the Department of Forestry and Environmental Science. A variety of services including environmental consultancy and advisory services, short courses and training programs on environmental management and sustainability are offered, especially for the corporate sector.

Web: www.sustainability.sjp.ac.lk

Telephone: +94 11 2758414

Fax: +94 11 2802937

Email: sustainability@sjp.ac.lk

1. Forestry and Environmental Science Society

Forestry and Environment Society is one of the leading student societies in the university. The society organizes both intra-curricula and extra-curricular activities such as field trips, training programs in Yagirala Field Research Centre, workshops, lectures, film festivals and social service activities. The main objective of the society is to enhance different skills of members while nourishing them with current knowledge in the field.

2. International Forestry and Environment Symposium

Distinguished as the oldest and most renowned Forestry and Environment Symposium in South Asia, the International Forestry and Environment Symposium, organized by the Department of Forestry and Environmental Science is the premier event where researchers, academia, professionals, policymakers, and the industry meet to discuss and learn about the latest developments in forestry and environment sectors. The Honors Degree students of the Department of Forestry and Environment Science can also present their research findings at this event, which will enhance their confidence to engage with scientific community.

3. Awards

1. Environmental Management and Forestry Gold Medal

This medal is awarded to the student who obtains a first class pass with the highest GPA at the B.Sc Honors Degree in Environmental Management and Forestry.

2. Jayantha Pathberiya Scholarship

This scholarship is awarded to the student who obtains the highest average marks for the Environmental Management and Forestry subject during the 1st and 2nd academic years of the B.Sc Degree

3. “Center for Sustainability-Dean’s Research Scholarship

The Center for Sustainability awards financial assistance for the three best performing students for the first three academic years to conduct Honors Degree research projects at the 4th year.

Department of Mathematics

Mathematics alone will enable a person to make a positive contribution to the society through logical thinking rather than rules & regulations.

Mathematics is the “Queen of Sciences”.

Scientific and industrial progress in recent years have made Mathematics one of the most important subjects of our time. In modern times, being versed in the language of mathematics helps one to make progress in day-to-day life. More than its role as a mere language Mathematics has now found an increasingly significant influence in many diverse fields, from management to medicine. An undergraduate degree in Mathematics will open the way to a future filled with wide opportunities for jobs and professions. Mathematics related professionals such as Actuarial Scientists, Accountants, and Statisticians are quite high in demand worldwide.

Furthermore, Mathematics alone will enable a person to make a positive contribution to the society. Mathematics is, in addition to being the language of science in its own right, a way of logical thinking rather than rules and regulations.

Degree Programmes offered by the department

- General Degree
- Honours Degree
- Postgraduate Diploma/M.Sc. Programs

Postgraduate Diploma/M.Sc. Programs

Being the first Faculty of Applied Science of the country and realizing the potential of graduates with a strong mathematical background, we launched

the first Postgraduate Diploma/M.Sc. program in Industrial Mathematics in Sri Lanka, in 1996.

Computer Technologies and Facilities

Though the Department of Mathematics has only a handful of academics, we are fortunate to have a sound blend of both 'Pure' and Applied' Mathematicians. As a result, the programs and courses of the Department of Mathematics are designed to cater to students, who are either strong in abstract thinking or more applied oriented. As there is a high demand for Computational Mathematics, the department has introduced a practical component each to most of the mathematics course units in the department with the students having access to a well-equipped computer laboratory.

There is a good collection of books on Mathematics in the main library, covering almost all sections of Mathematics. We strongly advice the students to refer these books whenever possible. Mathematics is an exciting field, which is not difficult to grasp, contrary to the view of the general public, and the lecturers in the department of Mathematics are willing, to help the students with their academic work and to guide them on other matters.

Career Opportunities in Mathematics

What can you do with a degree in Mathematics? Almost anything! As our world and economy become more and more science and technology-oriented, there is an increasing demand for people with

sharp critical thinking skills in Mathematics. The Mathematics Department offers both undergraduate and postgraduate programs at the master's degree level that prepare students for a wide range of careers, including employment in government and private sector, banks, industry, teaching careers and preparation for postgraduate studies.

The Mathematics Society

It was on March 31, 2011; that the Mathematics Society was founded with the vision of fostering an awareness and Appreciation of mathematics and its connection to other disciplines and everyday life.

The society representing all the mathematics students in the university, not only provides an opportunity for students to meet the lecturers and seniors to share their experiences in research and leadership qualities, but also organizes seminars for school children (especially Combined Mathematics seminars for A/L students) under the guidance of lecturers in the Department of Mathematics. All the efforts of the society directed in promoting mathematical understanding and skills, are manifested via its official web page.

Department of Physics

“Physics is a creative activity of the human mind. Studying Physics provides you with a delightful and rewarding experience that will make you suitable for any future career.”

Introduction

Physics is a dynamic discipline where new knowledge, applications and technologies are born every day. A degree in physics offers you the ability to stay ahead in the competitive world by offering you not only the subject knowledge but also the right tools to be creative and to think differently. It equips you with the analytical and personal skills that are essential for personal development, for whatever path you decide to take in the future.

The Department of Physics at the University of Sri Jayawardenepura offers courses that integrate both the foundational knowledge and the recent advances of the field, thereby ensuring students gain knowledge across the breadth of the discipline. Additionally, optional courses are offered in specialized subject areas that enable students to follow industrial aspects of physics. Not limited to the technical know-how of the field, students are also offered optional courses to help develop their soft skills such as presentation, communicational skills.

Hands-on learning is offered through the various laboratories at the department. These include an Elementary Laboratory, Optics Laboratory Electronic Laboratory, Applied Physics Laboratory, Embedded Systems and Robotics Laboratory, Computational Laboratory and Advanced Physics Laboratory. The department also has a workshop equipped with machinery and instruments.

Degrees Offered by the Department.

B.Sc. (General) Degree program with Physics as a subject

B.Sc. (General) Degree program with Electronics and Embedded Systems as a subject

B.Sc. (Honours) Degree in Physics

Special Degree students are provided with the opportunity to apply their knowledge and gain industrial experience through an industrial placement include, ITI, Atomic Energy Authority, ACCIMT, SLSI, Petroleum Resources Development Agency and CEA.

Postgraduate Level

The Department accommodates M.Phil. and Ph.D. students. Present Postgraduate projects are centered on Geophysics, Digital Electronics and Mathematical and Computational physics.

The Physics Society

The sharing of knowledge is not limited to the course material. The physics society is an active organization which organizes exhibitions, film festivals and popular talks that make the student life at the Department more vibrant and exciting. The Department also organizes seminars and

informal discussions on the topics such as Science, Religion, Literature and Philosophy through its Popular Science Gossip Programme.

Department of Polymer Science

With the rapid development of science and technology, the study and invention of more advanced materials have reached a new level. Polymer Science is a field that deals with both natural and synthetic materials like rubbers, plastics and fibers that provide the basis of many materials which have predominantly replaced the conventional materials like steel and glass. It, then branches into several disciplines such as polymer physics, rheology, and synthesis.

Introduction

Department of Polymer Science offers B.Sc. Honours Degree in Polymer Science and B.Sc. General Degree with Polymer Science and Technology as a subject. It is focused to have high quality graduates having sound knowledge in polymer science and polymer technology with preliminary exposure in industrial atmosphere to endow polymer scientists, polymer chemists and polymer technologists for working with new challenges, M.Sc. in polymer science and technology introduced in 1976 with the help of University of Aston is conducted at the degree is well recognized postgraduate program to polymer industry of the country.

Polymer science has exponentially expanded in a global context and global production of polymers has exceeded the production volume of steel. Polymers become a good replacement for the applications of steel, glass and ceramic since its light weight, energy serving production processes and acceptable chemical mechanical properties. Engineering polymers, domestic polymers, paints and adhesives and elastomers are some examples of the application-based categories of polymers.

According to the Flory (Nobel price, 1974), modern polymer science is a blend of organic chemistry, some aspects of physical chemistry, material physics, statistical mathematics, and some aspects of inorganic chemistry. Polymer technology is a combination of polymer science, some aspects of chemical engineering, rheology and reactor designing for polymerization, some mechanical aspects and mould designing. Its interdisciplinary nature makes it a fascinating and challengeable subject.

Degree programs offered by the department

B.Sc. Degree with Polymer Science and Technology as a subject

B.Sc. Honours Degree in Polymer Science.

International Symposium of Polymer Science and Technology

The first International Symposium in Polymer Science and Technology was held in collaboration with universities and industries in 2012. The symposium is conducted in every other year with the aim to merge academia and polymer industry on a common platform to exchange information and novel ideas to enhance research and generation in meeting global challenges with social responsibilities.

Postgraduate Courses

Department of Polymer Science offers M.Sc./ Postgraduate diploma in Polymer Science & Technology.

Society of Polymer Science

The Society of Polymer Science which is established in 2021 is one of the most active student societies in the university. The purpose of the society is to promote interest in Polymer Science among university students and schools and to provide the opportunity for experience and enrichment in the field.

Mr. Janaka Madushanka

Department of Sports Science

Sports Science involves the study of theoretical principles behind sports performance and the application of these principles to enhance the performance of athlete. The aim of the Sports Science and Management degree programme is to produce sports professionals who could contribute to uplift sports in the country.

Introduction

The Department of Sports Science was established in December 2017. The Department offers the B.Sc. Honours Degree in Sports Science and Management.

The Sports Science and Management Degree Programme is an interdisciplinary programme which focuses on the areas of anatomy and physiology, psychology, sociology, biomechanics sports technology, forensic science, sports medicine and sports management. One strength of the Sports Science and Management Degree Programme offered by USJ is the strong knowledge base required to cover all areas of the field of Sports Science, that can offer a comprehensive Degree Programme. At present, the Degree Programme is offered in collaboration with the Faculty of Management Studies and Commerce, Faculty of Medical Sciences and Gampaha Wickramarachchi University of Indigenous Medicine.

With national and international collaborations, the Department intends to enhance the depth and spectrum of Sports Science and Management education in Sri Lanka.

Advanced Diploma in Sports Science and Management

The Advanced Diploma in Sports Science and Management is designed to meet the increasing demand of sports practitioners who are thriving to excel their theoretical and practical knowledge in sports, sports science and sports management. This two year advanced diploma programme is approved by

the Ministry of Education for the school level coaches also. The entry qualifications are stipulated to meet the requirements of Sri Lanka Qualification Framework. Students who are enrolled for the programme can follow the programme in both Sinhala and English languages.

Team of Sports Science: The Students Association of Department of Sports Science

The Team of Sports Science (TOSS), the Students Association of the Department of Sports Science, was established in 2018 under the patronage of the academic staff of the Department

TOSS intends to enhance the potential of its members integrally through its diverse activities. In collaboration with a wide network of public and corporate sector organizations, TOSS engages in organizing several sports skill and facility developing programmes periodically focusing different stakeholders such as undergraduates and the university community, school-level students and general society

Department of Statistics

Our aim of training undergraduates in Statistics is to provide the: a broad knowledge in the subject Statistics; technical skills and the ability for critical statistical reasoning; opportunities to participate in statistical research; preparation for higher studies and for professional careers.

Introduction

The Department of Statistics offers Statistics as a subject for B.Sc. (General) Degree and also offers a B.Sc. Honours Degree in Statistics. Physical science undergraduates can follow Statistics for their three year general degree depending on the subject combination they are placed. Students are selected for subject combinations on the basis of their request and A/L z-scores.

The mission of the Department of Statistics is to produce high quality graduates and postgraduates in Statistics who can contribute to the national development and to the development of the discipline.

Programme Details

Aims and learning outcomes of course units, course contents, methods of assessment, handouts, past question papers, details on recent research activities and postgraduate programs etc. are available at our website <http://science.sjp.ac.lk/sta/>

Statistics for reliable decision making under uncertainty

Statistics is the scientific application of mathematical principles for collection, analysis, interpretation and presentation of any kind of data under uncertainty. Statisticians begin to contribute to scientific inquiry by applying their mathematical and statistical knowledge through the design of surveys and experiments and proceed until the final presentation of results. Statistics is an essential tool in any field where

decisions are made based on data. Statisticians apply their knowledge of statistical methods to a variety of subject areas such as biology, economics, education, engineering, medicine, public health, psychology, marketing, sports etc.

History of Learning Statistics in the University of Sri Jayewardenepura

Teaching Statistics in the university dates back to 1968. Until 1998, Statistics was offered by the Department of Mathematics. Later, the Department of Statistics and Computer Science was established in 1998. The present Department of Statistics was formed early 2014. The department offers Statistics as a subject for the General Degree Program as well as the Honours Degree Program in Statistics. In addition, the department conducts two postgraduate programs in Applied Statistics, namely Postgraduate Certificate in Applied Statistics and M.Sc. program in Applied Statistics. This is an evolution of the first ever self-financed postgraduate program in Sri Lanka, the Postgraduate Diploma in Statistics, which was established in 1968.

At present, about 400 undergraduates are studying Statistics as a subject. In addition to the essential theoretical knowledge, Statistics undergraduates are given ample opportunities to collect and analyze data, and prepare statistical reports related to real world problems.

They are also given sufficient exposure to statistical

software in analyzing data. Diversified learning activities and assessment methods such as individual and group assignment, presentations, seminars, individual and group projects are used to encourage active learning. This diversification helps to improve soft skills such as communication skills and teamwork. Independent learning is encouraged at all levels.

Candidates for the Honours Degree in Statistics are selected at the beginning of the third year, based on the performance in the first two years. Statistics Honours Degree students are required to undertake a comprehensive guided project. In addition,, they are exposed to the real world applications by means of a four-month, full-time, industrial training. They also gain vital experience in solving real world problems through the Statistical Consultancy unit in the department which offers its services to both on campus and off campus researchers.

The Department is dedicated to providing a conducive learning environment to produce statisticians who are capable of solving practical problems and contribute to the national development using their skills.

Statistic Society

The Statistics Society of the Department of Statistics was formed in the year 2009 with the intention of promoting Statistics amongst the students of the Faculty of Applied Sciences. Over the past few years,

the society has undertaken many initiatives in order to enhance the interest towards Statistics. Each year, the Statistics Society publishes a magazine, “STAT Plot”. STAT Plot allows our Statistics undergraduates to voice their thoughts about Statistics. This is the place where their thoughts about Statistics. This is the place where their creativity and divergent thinking take to the pinnacle. This is where their knowledge about Statistics is heard loud and clear. The society also annually organizes a “STAT Day” which brings together a variety of individuals including undergraduates, staff and industry professionals with a timely theme. The Annual “STAT Quiz”, held as a part of the “STAT Day”, is a synonym for the Clash of Statistics Geniuses. It is the perfect arena to show off their knowledge and skills, and a splendid opportunity to work as a team.

Knowing how and where your skills and knowledge can be best utilized would certainly be beneficial in the long run. What use of your knowledge can there be if you do not know how to give value for it? Therefore, the Statistics Society introduces career opportunities for undergraduates.

Department of Zoology

Department of Zoology offers three subjects namely, Zoology and Aquatic Resources Management and Biology to undergraduates of the Faculty of Applied Sciences.

History

Teaching of science at Vidyodaya was initiated in 1962 and teaching of Zoology as a subject was also commenced. However, Botany and Zoology Departments were amalgamated as the Department of Biology in 1966 but later again that Department was separated as Zoology and Botany in 1982 which continues up to date under the Faculty of Applied Sciences.

Present status

At present, Zoology as a subject is offered blending its applications focusing more towards the skill development of the students to suite the present day needs of the country. As a result, study components stem from the Department are Fisheries and Aquaculture, Limnology, Molecular Biology, Wildlife, Microbial Ecology, Insect Pest Management, Environmental Physiology etc.

Apart from that as a combination of marine and freshwater study components Aquatic Resources Management has been introduced as a new subject providing more opportunities for the students to learn specialized areas with a multidisciplinary approach

Aquatic Resources Management

This subject provides more opportunities for the students to use their knowledge in development activities of the country in a sustainable manner. We have resources with expertise knowledge in fresh, brackish and marine components to improve the skills of the students.

As in many other developed countries this will help the students to learn interactions of watersheds with the aquatic environment through water resources management, coastal resources management, water resources modeling, conservation strategies, aquatic resources planning and management, use of Geographic Information Systems as a tool in management of aquatic resources etc

Finally, this will provide an opportunity for the students to develop their skills to suite the present requirements of the country.

Mission

The mission of the Department is to promote and excel in Teaching, Learning and Research and Application in the fields of Zoology.

Undergraduate programme

The Department of Zoology offers three subjects for undergraduates: namely, Zoology Aquatic Resources Management and Biology. Students can select different subject combinations for their undergraduate degree programme.

The Department offers

Three-year B.Sc. (General) Degree

Four year B.Sc. Honours Degree.

Field Visits for Zoology and Aquatic Resource Management Students

Most of our Course Units are field oriented and are designed to widen the field experience and gain skills and practical knowledge in Aquaculture, Fisheries,

Limnology, Environmental Science, Wildlife Ecology and Ecology etc; The students will get the opportunity to conduct their field studies in Fisheries at Udawalawe Reservoir, Chilaw and Negombo estuaries etc. Aquaculture field studies at Dambulla and Udawalawa freshwater fisheries stations. Limnology field studies at Beira Lake, Kandy Lake and Bolgoda lagoon etc. Wildlife studies at Sinharaja Man & Biosphere Nature Reserve, Roomassala Coral Reef, Giritale Nature Reserve, Sigiriya Nature Reserve, Bundala Ramzar site and Anawillundawa Ramzar site. Visits will be arranged to the National Zoological Garden in cooperation with the Zoological Garden staff for the studies on Animal Diversity and Primate Evolution. These courses will be supported by means of video films and practical classes.

Industrial Training

The Department offers Industrial Training for B.Sc. Aquatic Resources Management and Zoology students to provide exposure to industries and other Research Organizations. Industries placement include the Central Environmental Authority (CEA), Industrial Technology Institute (ITI), Medical Research Institute (MRI), Tea Research Institute (TRI), Coconut Research Institute (CRI), National Aquatic Resources Research and Development Agency (NARA), Marine Environmental Protection Authority (MEPA), National Water Supply and Drainage Board (NWSDB), Coast Conservation Department (CCD), Department of National Zoological Gardens, National Aquaculture Development Authority (NAQDA) and other Private Sector Institutes.

Post Graduate Programme

The Department offers the following programmes at Postgraduate level;

- M.Sc./PGDip in Fisheries and Aquatic Resources Management

The Masters Degree / Postgraduate Diploma Program is designed to meet the increasing need for highly skilled Managers, Biologists or Biologically literate Mathematicians and Statisticians to work in Aquatic Resources Management.

Course structure

Two years in duration for M.Sc. and one year for Postgraduate Diploma. The course is Teaching Intensive with Practical Classes, Assignments, Field Visits and Individual Research Projects (M.Sc. only). Lectures will be conducted during weekends.

M.Phil and Ph.D. Degrees by Research

The Department registers students for M.Phil and Ph.D. Degrees by full time Research in areas within the Specialist and Research Interest of the academic staff.

Department of English Language Teaching

The aim of the Department of English Language Teaching (DELT) of the University of Sri Jayewardenepura is to make English available, accessible and eventually familiar to all students of the Faculty of Applied Sciences.

The DELT has designed all its courses in alignment with the UTEL (University test for English Language) benchmark and the evaluation criteria follows 4 and 5 banch. The DELT conducts a placement test at the beginning of the academic year of the first-year students. Those who obtain C or above C at the placement test are exempted from the compulsory course (ENG 201 2.0 English for Scientific Communication) and the others who obtain below C are required to follow the course ENG 201 2.0 English for Scientific Communication in their first year and take the exam at the end of the academic year. Therefore, ENG 201 2.0 English for Scientific Communication is a compulsory course for the students who cannot obtain C or above C for the placement test.

Career Guidance Unit

Career Guidance Unit helps undergraduates to develop their skills and abilities of self-assessment, information seeking and decision making required for coping with the needs of the complex world of work and to develop lifelong learning ambitions by providing services in Career Education, Career Guidance and Career Management.

Career Guidance Unit

The Career Guidance Unit (CGU) of the University of Sri Jayewardenepura aims to support and facilitate undergraduates to develop and enhance employability skills to be aligned with their life goals and to assist the graduating students in their employment search and career projects through different platforms.

Objectives of CGU

- To provide a service in Career Education, Career Guidance and Career Management
- To expose undergraduates and recent graduates of the university to a variety of resources including people, data and information
- To support undergraduates in their efforts to set life goals, plan future careers and put those plans into effect
- To support students for employability skills development through various activities and programs
- To help graduating students in their job search and career projects through recruitment related services

Services provided by CGU

- Facilitating the young person's transition from school to university by conducting awareness programs for the A/L students in the government schools

- Counseling and advising on careers
- Conducting employ ability skill development workshops
- Conducting CV writing and mock interview sessions Career-related information provision
- Networking with the industry by conducting Job Fairs
- Providing internship training for graduate job placement
- Conducting Outward Bound Training (OBT) camps for undergraduates
- Conducting entrepreneurship skill development program searching career guidance course units based on modules introduced by UGC Guiding students for research, development and innovations

Certificate Course offered by CGU HRM Course for non-HRM Students:

This 12 hr short course is conducted to teach the basic concepts of human resource management to students who are not following HRM as a subject in their degree courses in the Faculty of Humanities and Social Sciences, Faculty of Applied Sciences and Faculty of Medical Sciences.

Career Skills Development Society (CSDS)

CSDS is one of the main students' societies belonging to CGU. The CSDS, along with CGU, annually organizes diverse activities to enhance the employability skills of Undergraduates.

Touch the Peak - J'pura Annual Job Fair and Workshop Series

“Touch the Peak” is a programme that is specifically designed to provide an opportunity for undergraduates to engage with state and private sector organizations. This programme intends to develop employability skills, personality and qualities of graduates while introducing them to the world of work. The programme consists of an Annual Job Fair and a series of workshops on Leadership & Communication Skills, CV Writing, Employer Expectation & Interview Facing, Personal Grooming & Etiquette, HR Forum & CV Clinic and Mock interviews. All the recently passed out graduates are registered for this workshop.

Voyage Workshop Series

Voyage workshop series is based on developing positive values and attitudes along with the career skills of the university students. These workshops will be conducted by renowned motivational speakers and psychological counselors.

Shadow of Success

Shadow of Success is a workshops series that feature noteworthy personalities of the country who have thrived as professionals in their respective fields, gaining much respect and admiration. This programme aims to provide a sense of direction to our students, guiding them in making advantageous career choices with more conviction.

JESA - J'pura Employability Skills Awards

Introduced in 2015, J'pura Employability Skills Awards (JESA) focuses on recognizing the accomplishments of skillful undergraduates who have occupied the university space to reach beyond the expected; thus, capitalizing on their youthful years as an undergraduate. It thereby evaluates contestants under five avenues: Leadership, Creativity, Communication, Team Work and Innovation and a student from each of the six Faculties will be recognized as the “BESA - Best Employability Skills Achiever”, together with 3 Silver Medalists.

OBT Camp

CSDS also organizes OBT camps that help to improve skills of participants while building unity. The most prominent benefits of this kind of training is team bonding and self-confidence building of individuals. These activities help to sharpen and fine-tune the behavioral skills and qualities of individuals and also develop mutual trust and understanding among members of a group. This training helps to generate fresh ideas and better attitudes while boosting the team spirit, thereby ultimately supporting the undergraduates to achieve their life objectives.

Donate Happiness Cancer Hospital Project

“Donate Happiness” project is conducted help the children residing in Cancer Hospital, Maharagama. This program is organized annually at this hospital, providing every child a valuable gift. This programme

also intends to develop social responsibility skills among the members of CSDS.

Arunella Career Guidance Program for School Children

The “Arunella” program is conducted to introduce career guidance to the schools and to guide Advanced Level students to plan their future. This program was inaugurated in 2014 and was successful in making students aware about the career planning after the A/L examination and being qualified graduates in the future.

Green Hopes - CSR Annual Project

This program is designed to develop Environmental sensitivity among under gratuity and the active participate will be award certificates.

USJ FLAIR Creative and Performing Arts Circle

“Fair” the talent forum, is a club which was formed with the objective of acquiring and showcasing skills and fine turning diverse talents of Undergraduates. With a series of workshops to improve these capabilities and skills. The end of the year is marked with a competition carrying the motive of appreciation and encouraging the members to pursue their talents. Students who are interred in improving or discovering their skills can join the club and gain its benefits, while engaging in the activates conducted by the CGU. The members of “USJ flair club” annually

organize below mothered program to enhance artistic talents of undergraduates and help studies to manage to stress learning.

- “Rythem to Personality” Workshop Series.
- Guitar Traning” Programmers
- USJ musical band practices.
- Annual Talent Show
- Musical videos.

Gavel Club

The Education meetings held in the Gavel Club encourage members to improve their speaking skills through each session of the meeting. The meetings also enable students to inspire, persuaded and entertained by the other members throughout the sessions. The educational meetings are held every Tuesday and Thursday from 04.30 p.m. 06.30 pm. The Gavel club also organizes several notable events.

Vorbitor — Intra University Best Speaker Competition

“Vorbitor” is an Intra-University Best Speaker Competition organized by the Gavel Club of University of Sri Jayewardenepura. It provides a platform for undergraduates to showcase their talents. Being one of the main events conducted talents. Being one of the main events conducted by the Club, it provides a platform for students within the University to showcase their talents irrespective of the year of study or the faculty, The club highly motivated and

encourages undergraduates to partake in this event which provides an invaluable opportunity to improve their public speaking and communication skills.

Speech Master Inter-University Best Speaker Competition

Also organized by the Gavel Club is the Speech Master Inter University Best Speaker Competition, which is considered the biggest university-level best speaker competition across the whole island. Speech Master, from its inception, has been emulating to great heights, discovering the new dimensions of public speaking abilities. The event builds a platform for youth to showcase their talents and focuses on developing public speaking and leadership skills required to raise their voices to become future leaders.

Tharanya

The CSR project to the Gavel Club, consists of a one day program for an under-privileged school within the Colombo suburbs, which includes sessions of team building, motivation and soft skills development and an on-going project in which, students from the Department of English visit the school every Saturday to help improve students' English knowledge.

The Library

The mission of the library is to provide access to the library and information services in an efficient, effective and useful manner to support teaching, learning and research activities of the intellectual community by making resource materials available, and by assisting users to be acquainted with skills in locating information deemed necessary in the modern information age.

The Library

Profile

The Library plays an important role in university education supporting the three main pillars of the university: teaching, learning and research. There is a collection of more than two hundred thousand books, hundreds of journals and a few electronic databases in the library mainly to cater the eight main faculties.

The staff headed by the librarian Dr (Mrs) N. D. Wijayasundara ensures that the Library is updated and fully equipped to serve your needs.

There are three branch libraries under the main library; Medical, Engineering and Technology. Medical Library is located in the Medical faculty premises. This collection is specially developed for the users of the Faculty of Medical Sciences, Faculty of Allied Health Sciences, Engineering and Technology libraries are located in their faculty premises.

Organization of the Collection

Monographs are classified under subjects using an international standard, Dewey Decimal Classification (DDC) system and catalogued using Anglo American Cataloguing Rules (AACR II), All books in the library can be browsed using the Online Public

Access Catalogue (OPAC). This is available via the library home page (www.sjp.lib.ac.lk). For collection Organizing purposes, books are categorized as follows.

PR (Red R) : Permanent Reference - Not allowed for borrowing

SR (Green R) : Scheduled Reference - Overnight reference

Lending - Can be borrowed for a period of two weeks

Periodicals Division

Serial publications including journals and magazines are kept in the Periodicals Division. Library consists of print journals as well as electronic journals and databases. Scholarly journals including international journals and local journals cover many of the subject disciplines. Current issues are displayed on display racks according to the journal titles in alphabetical order. Bound volumes are also stored according to the same order of the journal titles. Availability of journal issues can be checked using Visible Index at Periodicals Division or thorough computer catalogue (OPAC).

Serials are only for reference. These are not for lending. Readers can get photocopies of required articles through the Photocopy Service Centre by paying the required amount of money.

	Normal Hours	During Examination period
Week days	8.00 am – 6.00 pm	5.00 am – 10.00 pm
Week ends	8.00 am – 6.00 pm	8.00 am – 6.00 pm
Poya days and other public holidays	-	8.00 am – 6.00 pm

Depending on the situational requirements opening hours of the library may change with prior notification.

Electronic resources

Library has acquired a number of electronic resources such as e books, e journals and bibliographic and full text databases covering almost all the subject disciplines. All these databases and other free electronic are listed under e-resources in the library website (www.sjp.lib.ac.lk). For some databases user name and password are needed while others can be accessed within the university premises. Remote access is restricted to those who have email facilities in the SJP domain. Some available databases are JSTOR, Emerald, Oxford University Press, Taylor and Francis, and Research Life and Scopus.

Interactive Study Area

All registered library users can get online access to electronic databases, journals and internet facilities within the multimedia centre, during week-days from 8.00 am to 6.00 pm. There are about 40 terminals in this centre.

Ceylon Room

The objective of maintaining Ceylon Room is to maintain books written about Sri Lanka and books authored by Sri Lankan authors Apart from those, Sri Lankan Government publications such as acts, Sri Lankan Government publications such as acts, bills, administrative reports, bank reports and publications of government corporations, boards and authorities, manuscripts are available in the Ceylon Room. Postgraduate theses submitted to the University of Sri Jayawardenepura and theses submitted by academic staff members to other University / Higher education institutions are also housed in the Ceylon Room. Palm leaf manuscripts collection is also housed in the Ceylon Room.

All the collection in the Ceylon Room is on Permanent Reference basis and not allowed to borrow.

English Learning Zone (ELZ)

ELZ is maintained for learning English language within the library. Basic grammar books and short story books are stored here.

How to use the Library:

Registration of new students, issuing of library clearance certificates and other reader services are handled through the inquiry counter located at the left side of the ground floor near the main entrance.

Bringing personal books, periodicals, news- papers, cameras, food and drinks except water bottles into the library is strictly prohibited. Personal belongings of library users should be kept in the cloak room upon obtaining a token.

Library Registration and Obtaining Library User Accounts

All registered students of the University are entitled to get the membership of the library. Library membership can be obtained by submitting a duly filled application to the inquiry counter together with student identity card or record book issued by the university.

Once a filled application is submitted, a library user account is created and it will be informed through your e-mail. The total responsibility of personal user accounts lies with the user and the library will no longer be responsible for any complaints made after activating individual user accounts. Users are responsible for the passwords of their accounts. Users must report any abuse or anonymous issuing of library materials on their accounts within 7 days of such misuse.

The account holder is responsible for any book issued (checked out) to their account.

Library facilities are terminated at completion of

studentship or termination of studentship at the university. Such students should return all borrowed library books to the library.

Issuing of Library Books

Undergraduates can borrow 04 books at a time (01 - SRScheduled Reference; 03 - Lending books). Books needed to be borrowed should be given to the officer at the main counter along with the student identity card or student record book. The due date is stamped on the date slip of the book and those books are inspected by the library security staff before taking out of the library. Books borrowed should be returned to the relevant counters on or before the due date.

The Loan period for Lending books is two weeks and for Scheduled Reference books it is overnight. Scheduled Reference books should be returned before 10.00 a.m. on the following day.

User Education

The Library conducts orientation programs for all new students. Library resources and their use is explained at this program. Specialized programs on Information Literacy and hands-on practical sessions on electronic resources are conducted to student groups at the request of academic departments.

Inter-Library Loan (ILL) Service

Library conducts a service to provide materials from other network of libraries if a particular item is not

available in our library. Library users are able to request this service by submitting a completed request form available in the library.

website to the library or emailing it to 'illusjp@sjp.ac.lk'.

General Rules on Library Use

Library users should produce the identity card issued by the university to prove their identification upon request by any library staff member.

Library users should not attempt to reserve seats in reading halls by placing books or other personal materials on tables or chairs. All personal materials should be taken when leaving the reading hall.

Library users should not attempt to reshelv books once they are taken out from book-shelves. They should be kept on tables instead. Books on shelves should not be purposely disordered.

Use of mobile phones and partaking food within the library are not allowed. Library is considered as a non – smoking area.

Library users are welcome to contract the Librarian or Academic Staff Members of the library for further assistance and clarifications in regard to library material and their access. The whole library staff is committed to assist you always.

Office of the Dean

The Faculty of Applied Sciences (FAS) is headed by the Dean. The office of the Dean co-ordinates all academic and administrative activities of the Faculty. Each academic department runs under the supervision of the Head of the Department who then reports to the Dean of the faculty.

The Faculty of Applied Sciences (FAS) is headed by the Dean. The office of Dean co-ordinates all academic and administrative activities of the faculty. Each academic department runs under the supervision of the Head of the Department who then reports to the Dean of the faculty.

A Senior Assistant Registrar or an Assistant Registrar is appointed to assist all administrative work in the faculty including all matters regarding the nonacademic staff, registration of students, examination work and secretarial work of the faculty.

Main task of the office is to provide the administrative mechanism required for coordinating the departments and degree programmes. Also it is responsible for programme scheduling, coordinating, academic advising and maintaining students records.

The record room which is a part of the office, takes care of marks processing programming coordinating the examination processes.

The Assistant Bursar attached to the Faculty of Applied Sciences helps the smooth functioning of the finance and supplies activities under the delegated authority.

Genetics & Molecular Biology Unit

The Genetics & Molecular Biology Unit was newly established to cater to the increasing need for competent Molecular Biologists with a strong Genetics background.

Introduction

Genetics and Molecular Biology are central to all biological sciences. Our mission is to provide the necessary toolset for our students to contribute to national development and the advancement of the field within the nation and worldwide. Graduates of our program will have a thorough understanding of the fundamental concepts of Genetics and Molecular Biology, in-depth knowledge of selected advanced concepts and techniques in these areas, and a good skill set. In a world where everything is intertwined with biotechnology, this knowledge and skill set combined with soft skills refined through various activities embedded within the courses will allow our students to integrate into any system where opportunity calls. Students will also have the opportunity to job shadow and train in an industrial setting to gain exposure and experience firsthand the applicability of what they are learning in the real world.

The unit, in concordance with other departments, offers the following subject combination:

- Biology, Chemistry, Genetics and Molecular Biology

Degree programmes offered by the Unit

B.Sc. General degree with Genetics and Molecular Biology as a subject

B.Sc. (Honours) degree in Genetics and Molecular Biology

B.Sc. (Honours) degree in Applied Sciences (Genetics and Molecular Biology)

Facilities:

The Genetics and Molecular Biology Unit is budding, with its recent access to teaching and research laboratories with the basic equipment required to conduct Molecular Biology experiments and research. Further, laboratory visits are organized to state-of-the-art facilities such as GeneLabs, Institute of Biochemistry, Molecular Biology and Biotechnology (IBMBB) at the University of Colombo, the Genetics laboratory at Lanka Hospitals Pvt. Ltd., and Plant Virus Indexing Centre to maximize the student exposure to various technologies in the field ranging from the most basic to the most advanced in the country.

Genetics and Molecular Biology Society

The Genetics and Molecular Biology Society (GeMSoc) of the Unit was formed in November 2020 with the intention of disseminating knowledge, developing soft skills, and providing entertainment for the students, especially during the hard times of COVID-19 closures. The society has conducted many activities during the two years since its inception; the students conducted an online trivia competition for interschool and interuniversity participants, webinars and discussions with experts in academia and the industry in Sri Lanka and from abroad, online workshops for O/L and A/L students and game-nights to relieve stress and strengthen the bonds between the students and academics of the Unit to name a few. The humanitarian project “Akura” is a commendable

community service project conducted by the students where they provided all the school supplies to students entering Grade 1 at a school in Neluwa, Galle.

Email: pamoda@sci.sjp.ac.lk

Dr. Kasun M. Thambugala

B.Sc. (Kelaniya), Ph.D. (Thailand)

Lecturer (Probationary)

Research Interests: Molecular phylogenetics and systematics, Plant pathology, Biological control of plant pathogens using microbial antagonists, fungal diversity, Molecular characterization of Polypores in Sri Lanka

Email: kasun@sci.sjp.ac.lk

Dr. S. H. Tennakoon

B.Sc. (India), M.Sc. (UK), Ph.D. (Austria)

Lecturer (Un-confirmed)

Research Interests: Cell signaling, Molecular basis of diseases, Herbal medicine, Molecular diagnostics

Email: samawansha@sci.sjp.ac.lk

Dr. P. D. Dayananda

B.Sc. (Colombo), Ph.D. (USJP)

Lecturer (On contract)

Research Interests: Dengue, Dengue virus, virus research, Molecular Entomology

Email: dilakshini@sci.sjp.ac.lk

Management Science Unit

Dr. Anuradha Iddagoda

MBA-HR (PIM-USJ), MIT (Charles Sturt-Aus), BIT (Charles SturtAus), PhD. (USJ)

Senior Lecturer

Research Interests: Human Resource Management (HRM), Employee engagement, Green HRM, High Performance Work Practices, Leadership, Work life balance

Email - anuradhaiddagoda@sjp.ac.lk

Dr. K.A. Kamal Gnanaweera

B.Sc. (Missouri State, USA), PGD (UoC), M.Sc. (AeU, Malaysia), MBA (USJ), Ph.D. (Toyama Prefectural, Japan)

Senior Lecturer

Research Interest: Corporate sustainability performance dimensions on firms' performance and sustainability management integration, Emergence of SMEs' marketing orientation and progression of entrepreneurship education.

Email - kamal@sjp.ac.lk

Student Affairs

Academic Counsellors Committee

Students are strongly advised to obtain guidance from Academic Counsellors prior to registration for courses/course units. Academic Counsellors of each subject are as follows.

Department Departmental Counsellors

Botany	Dr. Dimuthu. S. Manamgoda Mrs. G.G.S. Wajira Nanadane
Chemistry	Prof. Chayanika Padumadasa Dr. Mahesh Karunarathne
Computer Science	Mr. D. D. A. Gamini Dr. T.G.I. Fernando
Food Science & Technology	Prof. (Mrs.) I. Wicramasinghe Dr. J. M. J. K. Jayasinghe
Forestry & Environmental Science	Dr. Daham Jayawardana Dr. Chaamila Pathirana
Mathematics	Dr. Menaka Liyanage Dr. R. P. K. De Silva
Physics	Dr. W.K.I.L. Wanniarachchi Dr. (Mrs.) S. Kandeepan
Polymer Science	Dr. Thusitha Etampawala Prof. K.M.T.D. Gunasekera
Sports Science	Dr. S. Weerasinghe Dr. H.P.N.Perera
Statistics	Dr. Thiyanga Talagala Dr. Manjula Perera
Zoology	Dr. Varuni Gunathilake Dr. F. S. Idroos
Extended degree	Prof.Pahan Godakumbura

Subject Coordinators

Subject

Genetics and Molecular Biology

Economics

Electronics and Embedded Systems

Industrial Chemistry

Informatinand and Communications Technology

Management Science

Subject Coordinators

Prof. B. G. D. N. K. De Silva
Coordinator/Genetics & Molecular Biology Unit

Prof. (Mrs) U.A.D.P.Gunawardena
Dept. of Forestry & Env. Science

Dr. W.L.I.L. Wanniarachchi
Dept. of Physics

Dr. A. T. Cooray
Dept. of Chemistry

Dr. T. M. K. K. Jinasena
Dept. of Comp. Science

Mr. G. J. K. Silva
Dept. of Mathematics

Student Counsellors Committee (SAC)

To obtain advice on students welfare activities such as attendance, medical certificates, hostels and canteens, scholarship & bursaries the following Student Counsellors Committee has been appointed by the Faculty Board under the approval of the Senate.

Prof.L.Karunanayake	(Dept. of Polymer Science)
Dr.Rinukshi Wimalasekara	(Dept. of Botany)
Dr.N.P.L.N. Palliyaguru	(Dept. of Chemistry)
Dr.T.G.I.Fernando	(Dept. of Computer Sc.)
Dr. Madhura Jayasinghe	(Dept. of Food Sc. & Tech.)
Dr. Daham Jayawardana	(Dept. of Forestry & Env. Sc.)
Dr. Menaka Liyanage	(Dept. of Mathematics)
Dr. N.C. Ganegoda	(Dept. of Mathematics)
Dr.(Mrs). W. W. P De Silva	(Dept. of Physics)
Mr. C.H. Manathunga	(Dept. of Physics)
Mr. P.Dias	(Dept. of Statistics)
Dr. D.C.T.Dissanayake	(Dept. of Sports Science)
Dr.H.P.N. Perera	(Dept. of Zoology)
Mr. A.L.K.R.Fernando	(Dept. of Sports Science)
Prof. Pahan Godakumbura	(Extended degree)
Dr. S. Hettiarachchi	(Chief Medical Officer)

Students should find the following information very useful.

The help line for Students	072 6885344
Director of Student welfare	Prof. Hemantha Kottawatta 0112758330
Proctor/	Mr. A.R.P.C. Udayakumara
Deputy Proctors/FAS	Dr. R. R. M. K. P. Ranatunga Dr. Priyan Perera Dr. N. M. S. Sirimuthu Dr. P. R. S. De Silva
University Medical Officer	0112803199, 0112758499

Scholarships /Medals offered by the faculty

Dr. Sirimathie Wewala Scholarship

Awarded to the Mathematics special degree student who obtains the highest GPA in the first three years of the B.Sc. (Honours)Degree for Mathematics.

S. V. Wickremasinghe Scholarship

Awarded to the student who obtain highest GPA in the first year among the students with economic

Applied Science 78 Group Scholarship

Awarded to the student who obtains highest GPA in the first year.

Jayantha Pathberia Scholarship

This scholarship is awarded to the student who obtains the highest average marks for the Environmental Management and Forestry subject during the 1st and 2nd academic years of the B.Sc. Degree.

Professor Tuly de Silva Gold Medal

Awarded to the student who obtains highest GPA at the B.Sc. Chemistry (Honours) degree examination.

Professor G.C.N. Jayasuriya Gold Medal

Awarded to the student who obtains overall highest GPA for Chemistry subject in the B.Sc. general degree examination.

Dr. Sirimathie Wewala Gold Medal

Awarded to the student who obtains a First Class Pass with the highest GPA at the B.Sc. (Honours) Degree in Mathematics.

Professor R. A. Dayananda Gold Medal

Awarded to the student who obtains a First Class Pass with the highest GPA at the B.Sc. (Honours) Degree in Statistics.

Professor W. S. Fernando Gold Medal	<p>(i) Awarded to the student who obtains highest GPA physical and Inorganic chemistry at the B.Sc. (Honours) Degree in Chemistry.</p> <p>(ii) Awarded to a General Degree student with highest GPA in Statistics.</p>
Professor P. C. B. Fernando Gold Medal	Awarded to the student who obtains a First Class Honours with the highest GPA for all Physics course units at the B. Sc. (Honours) Degree examination in Physics.
Professor H. G. Nandadasa Gold Medal	Awarded to the student who obtains a First Class or Second upper Pass with highest marks in B.Sc. (Honours) Degree in Plant Biotechnology.
Professor Piyasiri Amilasith Yapa Gold Medal	Awarded to the student who obtains a First Class Pass with highest marks in B.Sc. (Honours) Degree in Plant Biology.
Environmental Management and Forestry Gold Medal	Awarded to the student who obtains a First Class Pass with the highest GPA at the B.Sc. Honors Degree in Environmental Management and Forestry.
Chemical Industries Colombo Ltd. Prize	<p>Award 1 : This prize is awarded to the student who obtains the highest GPA of the final examination in the B.Sc. Chemistry (Honours) degree</p> <p>Award 2 : For 2 students who have obtained the highest GPA at the B.Sc. (Honours) degree 3' year ending examination</p>
L.A. C.A11es Award	Awarded to the student who obtains highest qualifications for the Food Science and Technology subject in the B.Sc. (Honours) degree in Chemistry.

Prof. Winstan Eric Ratnayake Memorial Award	Awarded to the student who obtains a First Class Pass with highest GPA in B.Sc.(Honours) Degree in Zoology.
Virtusa Academic Merit Prize	Awarded to the student who obtains a First Class Pass with highest GPA in B.Sc. (Honours) Degree in Computer Science.
Polymer Science & Technology M.Sc. Alumni Gold Medal	Awarded to the student who obtains the highest GPA with a Second Class Upper pass and the highest number of 'A' grades for the Polymer Science & Technology subject in the Bachelor of Science Degree.
Dr. Sunethra Weerakoon Gold Medal	Awarded to the student who obtains a first class pass with best performance in Mathematics at the B.Sc. (Honours) Degree in Mathematics.
Sports Science and Management Gold Medal	Awarded to the student who obtains a First Class pass with the highest GPA and the highest number of 'A' grades in B.Sc. (Honours) Degree in Sports Science and Management.
Prof. S. Chandrani Wijeyarathna Gold Medal	Awarded to the student who obtains a First Class or Second Upper pass with the highest GPA in B. Sc. (Honours) Degree in Microbiology.
Sumangala Gold Medal	Awarded to the student who has shown the highest level excellence in both academic and extra-curricular performances among the students who have secured the highest GPPA at the Bachelor of Science Degree Exam

Dean's Research Scholarship

The Center for Sustainability awards financial assistance for the three best performing students for the first three academic years to conduct Honors Degree research projects at the 4th year.

Gold medal for the "Best Performance in Polymer Science (Hons) degree" sponsored by Dipped Products PLC

Awarded to the student with a First Class with highest GPA and obtaining GPA of 2.00 or above for two subsidiary subjects (Chemistry and Physics) and GP of 2.0 or above for all Polymer Science courses at the first attempt

The Alumni Association of the Faculty of Applied Sciences University of Sri Jayewardenepura

The Alumni Association of the Faculty of Applied Sciences University of Sri Jayewardenepura

The Alumni Association of the Faculty of Applied Sciences, University of Sri Jayewardenepura was established on 16 March 2013 to foster a lifelong connection between the university and Alumni. The mission of the Alumni is to guide the university to achieve academic excellence by strengthening the ties between its communities.

The objectives of the association are:

- To encourage, foster and promote close relations between the Faculty and its alumni and among the alumni themselves,
- To promote, in the alumni body, an interest in the affairs and well-being of the Faculty. o To provide and disseminate information regarding the Faculty its graduates, staff and students to the alumni,
- To initiate and develop programs for the benefit of the alumni,
- To assist and support the efforts of the Faculty in obtaining funds for its development,
- To serve as a forum through which alumni may support and advance the pursuit of academic excellence at the Faculty, To guide and assist alumni who have recently completed their courses of study at the Faculty: o obtain employment and engage in productive pursuits useful to society.
- To pursue any other activity consistent with the above objectives

Office Bearers of the Association for 2013-2015

The President: Prof. Wimaladarma Abeywickrama

The Vice-Presidents: Dr. Prasansa Kalukottege
Dr. Kamal Ranatunge
Mrs. Shimali Lokuge

General Secretary: Mr. Nimal Athukorala

Assistant Secretaries Dr. Pahan Godakumbura
Mrs. Deepika Nethsinghe

Treasurer: Prof. Hiran Amarasekera

Assistant Treasurer: Mrs. Rasika De Silva
